

Equipment Line Card

Arizona CNC is a local distributor of machine tools and automation products. For over 25 years, we have served job shops and manufacturers. We offer CNC machine tools, accessories, replacement parts, laser calibration, applications engineering, programming, training, tech support, and full turn-key solutions. Bring us your manufacturing challenges, and our team will help you find the right solutions.

PRECISION MACHINES

EXPERT SUPPORT

PROVEN RESULTS

Okuma has built high-quality CNC machines and controls since 1898. Designed for precision, performance, and reliability—all at a great value. From lathes and mill-turns to machining centers and grinders. Okuma designs both the machine and the control, ensuring seamless integration, superior accuracy, and unmatched support—all at a competitive price.

Tsugami manufactures high-precision Swiss-type CNC laths, turning centers, machining centers, and multi-tasking machines. Since 1923, it has become the world's largest machine tool builder, focusing on small parts measuring 0.5 to 38 mm. Tsugami's advanced CNC machines provide high speed, accuracy, and precision, allowing them to cut tougher materials and outperform the competition.

Seibu, founded in 1927, created the first CNC wire EDM in 1972. Their wire EDMs are crafted by skilled Japanese engineers, not mass-produced. Made in a temperature-controlled environment with LED lights, these machines are built for lasting precision and durability.

TRUMPF

Laser marking systems from TRUMPF are available in different sizes and laser classes, as well as with a variety of equipment. From marking to surface treatment such as cleaning and texturing - we have the ideal device for every application. Our marking systems offer you a complete turnkey solution including software and image processing and can be individually configured thanks to a flexible selection of options.

PRECISION MACHINES

EXPERT SUPPORT

PROVEN RESULTS

The Nomura DT is a compact, efficient drilling and tapping center. It handles tasks from light cutting in the IT industry to heavy cutting in firearms and automotive sectors. Its direct-coupled spindle motor and sturdy spindle reduce acceleration and deceleration time, boosting productivity.

NOMURA DT

PRECISION MACHINE TOOLS

Sharp has supplied high-quality manual and CNC machine tools for over 43 years. Products include knee mills, lathes, grinders, and CNC machining centers. If you need an affordable, high-performance machine, Sharp has the right option for you.

Soraluce provides heavy-duty CNC milling machines, boring machines, vertical lathes, multitasking solutions, and automated systems. They focus on customizable machines for large, complex parts and develop innovative solutions to help customers improve productivity. Soraluce sets new industry standards.

SORALUCE

Heavy-duty vertical turning lathes are built to machine large and heavy workpieces. You can choose models for turning only or those that can turn and mill with a C-axis. Momentum machine tools offer high performance at competitive prices.

Produces large, heavy-duty horizontal CNC turning machines for parts up to 138 inches in diameter and 945 inches long. These machines can be customized for various tasks, including turning only, turning with live tooling, C-axis, or Y-axis operations. They also feature strong machines for multitasking, allowing you to turn, mill, grind, and change tools in a user-friendly design.
