

Global Machine Brokers is a high quality industrial asset management company that has Manufacturing Engineers working on staff that understand your needs and wants. We know what production equipment is and how it works. You won't get a machine salesman that has never seen a machine or does not know one end of the machine from the other. We have contacts all over the country and can sell most any machine quickly. We advertise all over the world in print, the web, trade shows and good old word of mouth.

We manage the rigging and hauling of your purchase or sold piece of equipment. We won't sell you a piece of equipment and leave you hanging trying to find a rigger in the area the machine came from. We know the best and most competitively priced riggers. We haul equipment all over the continent and have good rates for vans and flat beds.

If it is too difficult for you to come see the equipment or your not sure if this could be the piece, we can arrange for an independent third party certified appraisal or condition report. Save the air fair and the time and let us get an expert in the field of your prospective piece of equipment give you the straight answers on the machine condition.

On brokered machines, we make an agreed upon commission. Our commission is usually between 10-25% depending on the asset value and difficulty of the upcoming sale. If you need to sell your machine quickly and or clear out a space, we will offer you a fair price for the equipment and conduct all the removal tasks.

GMB will Sell, Broker or Purchase almost any type of Manufacturing Machinery!
