Central Granulators

## B Series Granulators Offer High-Capacity Reclamation

Cumberland B Series heavy duty granulators are designed for high capacity central reclamation. They can granulate a wide range of plastic scrap, from low density fiber to thick, high molecular weight purgings and can be integrated with a variety of handling equipment.

The B Series comes in 37" and 50" widths with throughputs from 2500–4000 lbs/hr. Designed for many years of rugged use, the B Series combines bolted and dowelled heavy steel construction with Cumberland's "Chevron" rotor style provide years of worry free production.
