

Y:MA SEIKI

The ultimate machine power

Y:MA SEIKI

MACHINING CENTERS by AWEA

Since 1986, Awea has been recognized for the quality and performance of their machine tools. The engineering, high quality standards, hand scraped construction and precision assembly are second to none. The precision and durability of their Bridge Mills, Gantry Type Machines and Vertical Machining Centers is legendary in the industry.

TURNING CENTERS by GOODWAY

Established in 1975, Goodway is the largest and most advanced manufacturer in Taiwan that specializes in the development and manufacture of CNC turning machines. Their extensive offering includes horizontal turning centers, vertical turning lathes, twin-spindle machines and swiss machines.

Juaristi produces the most robust and accurate horizontal milling machines available. These machines combine power and precision unlike any other, with head changing options including straight, 3+2, and simultaneous 5-axis milling capabilities.

JUARISTI

Large multi-axis horizontal machine tools

Grinding solutions since 1952

GER specializes in production of medium and large CNC Grinders – Cylindrical; Internal; Vertical; Rotary Table with Horizontal Spindle; Plane Surface and Profile Grinders. Since 1952, GER has installed over 6000 Grinders in more than 25 countries; mainly in Europe. The industries served include: Aerospace, Automotive, Bearings, Gears, Injection and other molds, Dies, Machine tools, and more.

High productivity thanks to high machine dynamic

Fooke leads the industry with their ultra-modern linear motor gantry milling machines. The *Fooke Endura* machines are designed for simultaneous 5-axis machining and high speed milling.

Innovative technology-driven solutions

SAMAG is a leading manufacturer of multi-spindle horizontal machining centers (Samag MFZ), multi-spindle deep drilling machines (Samag WBM), deep drilling-milling centers (Samag TFZ) and special purpose machines.

Worldwide leader in advanced technology

GROB G-Series 5-axis universal machining centers are ideally suited for work pieces requiring 5-sided/5-Axis simultaneous machining, with compound angled holes and 3D surfaces. A horizontal spindle, coolant through, and linear scales are equipped as standard, with the option of adding a pallet changer, making it the most versatile CNC machines in the market today.

Power, precision and long-term reliability

SNK is the industry leader in double column machining centers, 5-axis profilers, and special purpose machines such as vertical lathes, horizontal multi-centers and high-rail gantry machines. All SNK machines are designed and built to achieve the highest levels of accuracy, rigidity and dependability.

SNK is a world leader in the design and development of large machine tools for the Automotive, Aerospace, Energy, Construction, and Mining industries.

Technology on demand

SNK/Nissin Planer Type Boring Mills deliver outstanding machining capabilities to easily satisfy a wide range of machining requirements. All models, both standard and heavy-duty, offer generous work envelopes and travels for expanding capacity, streamlined workpiece loading/unloading and operator convenience.

The pioneer in machine tool precision

Niigata horizontal machining centers are renowned the world over for precision, quality and durability. Their robust design and construction makes them ideal for even the most demanding metal cutting challenges. Available in full boxway, linear guideway and hybrid designs, *Niigata HMCs* also offer a host of model variations such as BAR Spindle and U-axis that further expand machining applications. All *Niigata HMCs* are ideal for cell and FMS expansion so they can grow as your needs do.

Machine Tools that will take you to the next level!

A family of integrated machine tool accessories

Rotary tables, angle heads and Live tools

Controls for milling machines, lathes and routers

Precision measurement and control equipment

Quality industrial air filtration systems

Metrology and industrial technologies
