

DM-9B

Wheel Dressing Machine

The DM-9B is a standalone, manual dressing machine designed to dress 9" diameter by up to 10-1/8" wide wheels used on the PG-9BHD and PG-9DHD. Featuring the same work head assembly as a PG, the DM-9B allows a wheel to be contour dressed with the same method employed on the grinder. The ability to dress wheels offline increases efficiency and minimizes downtime. Having wheels ready for changeover allows the grinder to be used only for its intended purpose -- making parts. Dust collection with optional HEPA filter ensures a clean, comfortable work environment.

For an automated CNC version, we offer the DM-9.

KEY FEATURES

- Simple, compact design
- Dust collection

SPECIFICATIONS

- Work wheel diameter: 9" (229mm)
- Work wheel length 10-1/8" (257mm)
- Work wheel spindle power: 1HP (0.75kW)
- Work wheel RPM: 2400

ACCESSORIES

- Contour work wheel dressing attachment
