

About Team Plasma-Tec

Located in Metro Grand Rapids, Michigan, Plasma-Tec manufactures and coats precision, turned, machined and ground components for various OEM industries, with a niche in high wear applications such as pump components. We are experts in precision machining, turning and grinding as well as wear-resistant, anticorrosive hard coatings.

Plasma-Tec can spray, machine, turn and grind: ceramics, carbides, and virtually hundreds of different metals and their alloys. We have expertise in machining a wide variety of base materials such as low carbon steels, superalloy and nickel-alloy steels, stainless steels, brass, bronze, and other specialty metals. Our coating processes include Spray & Fuse, HVOF, Rokide, Plasma and Twin Wire Arc, as well hard chrome plating.

Our facilities encompass over 30,600 square feet and are equipped with state of the art spray equipment, as well as CNC lathes, CNC mills and CNC grinding machines. We have a fully equipped, environmentally controlled Quality Lab.

Plasma-Tec has been a leading provider of precision turned, machined and ground coated and non-coated OEM components for over 30 years!

"When we needed a one-stop supplier for coated components, Plasma-Tec came through. Price-Price-Price buying wasn't working. Two large customers were upset due to quality and delivery issues. We sat down with Team Plasma-Tec and worked out pricing and moved to sole sourcing. Five years later we have stable pricing, excellent on time performance, quality and our salesforce is able to sell on delivery rather than price."

Commodity Manager,
Major International Pump OEM

"We were moving our facility and decided to outsource our coated components. Plasma-Tec came to the table with the best package of infrastructure, human resource, technical and logistical investments - allowing us to have a make complete, sole source partner. This has been a great relationship for over 10 years."

Plasma-Tec, Inc.TM

PRECISION TURNING GRINDING THERMAL SPRAY

Team Plasma-Tec is your “make complete” source. We like to say that we supply your needs from our raw stock to your dock.

Base Materials

From stainless to carbon, aluminum to brass and everything in between we can machine, thermal spray and grind a virtually endless combination of materials to suit your specific application.

From Raw Stock... To Your Dock

We...

- Procure the material
 - Machine it
 - Coat it
 - Grind it
 - ...all to your exacting specifications... all under one roof!
-
- Only one vendor!
 - Short leadtimes

We can...

- Eliminate lead-time
- Free you from logistical costs and nightmares
- Solve your quality issues
- Greatly simplify your order process
- Do it all with a single PO!
