Durma lasers guarantee precision, low maintenance costs, low operating costs and longterm reliability.

These features along with large investments in modern manufacturing equipment have made Durma the largest volume laser machine producer in the world.

All Durma laser machines are produced with modern design technology increase your productivity with excellent part production. Demanding applications are easily achieved. A broad offering of sizes and features satisfy nearly all economical requirements.

Durmazlar has aimed continuous development since 1956

Owes one of the world's most contemporary production plants in the production technology business. 3 different plants oriented to different product families, 1000 dedicated employees and 150.000 m² footprint.

In order to offer solution according to clients needs and enriching the quantity and quality of its own patent rights; long experienced Engineering Department transformed to Durma Research & Development Center has opened in the year 2010. Designed and engineered with modern technics; its products are equipped with proven quality components to precisely fulfill your requirements.

We serve "accuracy, speed, flexibility, durability, reliability and advanced technology" with high performance/price ratio. Worldwide Durma distributors and technical support network assures perfect support to our clients.

With its 60 years of experience, its product quality, innovative solutions Durma gives importance and cares you with proactive approach. We thank all our clients to hold us at the top segment of the world brands.

BASIC MACHINE

The DURMA HD-F / HD-FL machine is high speed 2-D laser cutting system for machining flat sheet plates. It works on the principle of "Flying optics". This means that the raw sheet rests on the cutting table and the laser head moves in X and Y directions. This construction type allows extremely high acceleration values and, in conjunction with a direct encoder measuring system, maximum precision of the component geometry. Moving axes are driven by dynamic low moment of inertia and high performance AC Servo motors that don't need maintenance. Machine and the bridge are welded construction. After the welding, machine body and the axes are subject to stress relieving treatment. This process eliminates the deviations in machine geometry and stresses that may result during welding. Dust and suspended particles are vacuumed via a sectioned chamber system during laser cutting. A conveyor system have been integrated to the machine in order to carry the scrap particles to the scrap bin during cutting. The shuttle table is designed to increase the productivity and minimize the material preparation time. The table allows loading of raw metal sheets or unloading of finished parts onto one table while the other table is on duty. The compact design of the machine requires less floor space and transfer, load and unload as one piece without disassembling the main frames.

Rack&Pinion Motion System (HD-F Series)

Axes motion is achieved by rack and pinion design. There are not any intermediate load transmitting elements between the motor and the pinion which otherwise could cause precision losses. High precision two-way, hardened helical racks with low clearance make it possible to achieve very high acceleration (10m/s^2), speed (100m/s) and accuracy ($0,05\text{ mm}$) values.

Linear Motor Motion System (HD-FL Series)

Moving axes are driven by high velocity and acceleration linear motors which are the latest development in linear technology. These motors make it possible to achieve very high acceleration (20m/ss^2), speed (200m/s) and accuracy ($0,03\text{ mm}$) values.

LASER SOURCE

The dynamic operating range of IPG's low-ordermode kilowatt class fiber lasers is available from 10% to full power with no change in beam divergence or beam profile throughout the entire range. This allows a single laser to be utilized for both high and low-power applications. IPG lasers' divergence specifications are far superior than other lasers and allow the use of long focal length processing lenses for vastly improved depth of field, less damage to optical components. The units can be supplied with fiber lengths to 100 meters, different fiber diameters. Fiber lasers have a monolithic, entirely solid state, fiber-to-fiber design that does not require mirrors or optics to align or adjust and are typically smaller and lighter in weight than traditional lasers, saving valuable floor space.

Resonator	1.0 kW	2.0 kW	3.0 kW	4.0 kW	6.0 kW
Product designation	YLS-1000	YLS-2000	YLS-3000	YLS-4000	YLS-6000

LOWER PROCESSING COSTS

Improved productivity and significantly less energy consumption = lower cost per part

- Excellent beam parameter product (BPP)
- Constant BPP over entire power range
- Small focus over large working distance
- Maintenance free operation
- Modular 'Plug & Play' design
- Compact, Rugged & Easy to install
- Estimated diode lifetime up to 100,000 hours

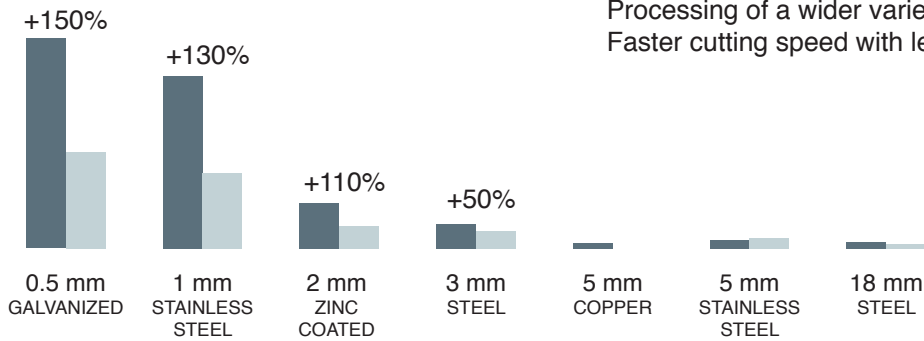

FIBER CUTTING SPEEDS (kW/Material Thickness)

■ 3 kW Fiber

■ 4 kW CO₂

Fiber's higher absorption and excellent beam quality enable
Processing of a wider variety of materials
Faster cutting speed with less power

COMMAND UNIT

The Sinumerik 840D CNC controller is an efficient 32-bit microprocessor system with an integrated PC. The controller has a Durma operator interface and a complete cutting database for all standard cutting applications. The database includes the cutting parameters for standard materials (steel, stainless steel, aluminum) for common thickness ranges. Based on these reference values the operator can easily improve the cutting quality for different types of materials.

Control Unit	Control Unit
CNC	840D-SL, NCU573,5 6MB User RAM Memory
PC: PCU50.3	Win XP pro 2.0GHz Intel Processor 40 GB HD
Port	2x Ethernet;4xUSB; 1x Profibus
Expansion Slots	2xPCI ; 1xCF Card
Screen	15" TFT (Touch Screen) Colourful Monitor
Laser Cutting Head	PRECITEC PROCUTTER
Focus Length	150 mm

- The laser power is controlled as a function of the path, velocity, time and travel
- Closed-loop clearance control can be universally adapted
- Optional functions
- 6 MB expanded user memory and USB external memory option

CAD/CAM SOFTWARE

- Advanced optimisation: tools optimisation
- Fast tool way collision protection. Toolway optimisation to prevent damage from possible deformed material
- Real type writing styles: Writings supported by your operating system can be applied directly on the material to be cut
- Cutting direction, clockwise or opposite is supported
- Advanced corner applications provides perfect corners and soft cutting. Fillets, cooling, slowing down, circulation
- Shared Cuttings: This property is especially useful for thick plates and reduces the need for making holes during cutting
- Automatic entry point
- Fully automatic cutting
- Z-axis control

LASER CUTTING HEAD

The ProCutter offers a complete solution for the laser-based fusion cutting of thin and medium material thicknesses in the wavelength range around 1 μm . In flame cutting, greater material thicknesses can also be processed while maintaining high standards of quality. The potential of the cutting head is optimally converted into productivity, especially in the case of flatbed and pipe cutting machines, where innovative technologies are combined with proven concepts, providing the best possible performance, range of flexibility and degree of reliability.

The combination of proven technology and optimized design enables processing with up to 6 kW laser power in the near-infrared range – and gives you reduced installation space and weight at the same time.

A robust and dustproof housing ensures a long service life and allows external linear drive accelerations up to 4.5 g, enabling an efficient cutting operation. High-quality optics and the highest standards of quality in manufacturing and assembly ensure optimum laser beam guidance and shaping with high focal position stability, even at high laser power.

EFFICIENT

- + Lightweight and slim design created for fast acceleration and cutting speed
- + Motorized focus position adjustment for automatic machine setup and piercing work
- + Drift-free, fast-reacting distance measurement
- + Permanent protective window monitoring
- + Values displayed via Bluetooth®

FLEXIBLE

- + Selectable optical configuration, optimized for the range of applications
- + Straight and angled design versions adapted to the machine concept
- + Zoom lens for automatically adjusting the focus diameter
- + Motorized or manual focal position adjustment

USER FRIENDLY & SAVE

- + Completely dustproof beam path with protective windows
- + LED operating status display
- + Display of operating parameters via Bluetooth® and interface for machine control
- + Pressure monitoring in the nozzle area (gas cutting) and in the head
- + Monitoring of the piercing process and detection of cutting breaks with CutMonitor

App for iOS and Android gadgets

The cutting head for every task Dynamic laser cutting machines require lightweight, intelligent cutting heads. Even installed in the smallest possible space, the ProCutter offers a fully-integrated sensor system that monitors the cutting process and provides the user with relevant information. The head ensures that each component can be reproducibly manufactured at a high standard of quality.

Adjustment of focal length:
Can be done manually or
motorized via machine control

Focusing Lens:
High-quality optics | X/Y adjustment |
no repositioning after changing
necessary | additional protective
glass below focusing lens

Protective Glass Cartridge:
to protect the optics against
dirt and fume | monitoring of
attendance and contamination |
toolless, easy change

LED Bar:
For immediate display of the current
system state (pressure, temperature,
drive, contamination)

Distance Measurement:
fast, exact, drift-free distance
measurement at any operating
temperatures, even at high
accelerations

External Interface: Output of all sensor
data as an analog value | readout the
values via Bluetooth® | set of thresholds

Protective Glass of Collimation Unit:
At straight configuration

CutMonitor: Monitoring of
piercing process and detection
of cut interruption | integration
into angled collimation

Mounting of the head:
easy accessibility from the front

CHILLER

Mono-block refrigerators for internal and external use supplied with pump and tank designed for water or glycolate cooling systems. Especially designed for welders, inductors, food-packaging machinery, laser cutters, tooling machines, die-casting processes, molding and extruding processes of plastic materials, aerodynamic pumps and wine-making industry. Triplephase versions only, available. Various optionals are available to meet every industrial requirement.

UPS UNINTERRUPTED POWER SUPPLY

C1 Series Uninterruptible Power Supply (UPS) is a high technology product that was manufactured to provide uninterruptible energy to fields including but not limited to industrial facilities, hospital, schools, banks, business centers, and computer and communication systems. You can use your device, which is equipped with static bypass system, all necessary protection systems and an online structure with all loads safely.

Because this device was designed double conversion online system basis, it supplies all connected loads with continuous voltage with stable frequency and stable amplitude. Therefore, no transition period is necessary when electric power is interrupted or recovered.

With deployment of a DSP (Digital Signal Processor) based microprocessor in its design, UPS output voltage is accurately controlled, thereby ensuring stable operation of devices that are sensitive to voltage fluctuations.

FILTER

Used to eliminate dust, particles and harmful fumes generated during cutting. It is fully automatic dust collecting shake filter.

Easy access to filters and dust bin mechanism

Less noise level

SAFETY

The laser cutting system, machine and CNC controller are fitted with safety devices. These switches and sensors, on one hand, protect the operator from hazards and, on the other hand, counteract damage to the system, e.g. as a result of incorrect path measurement programming or collision between the workpiece and the machine. A diagnosis system keeps the operator informed about the current status of the system and allows him to intervene in the dialogue to make corrections for remedy and faults. The steps that should be carried out for this purpose appear as plain text on the controller screen.

PROTECTIVE MEASURES

The working area of the machine is screened off with sliding doors. These can be opened to gain free access, e.g. to insert a new steel sheet billet, lens and head replacement, general maintenance and for other purposes. During a laser cutting operation the safety devices are electromagnetically locked in order to prevent an accidental triggering of the machine's EMERGENCY STOP function. The machine's safety equipment corresponds to the CE guidelines currently in force. The machine is windowed by makrolon coated material (allowing to see inside) and enclosed by a cabin.

MULTI CHAMBERS HIGH EFFICIENT SUCTION SYSTEM

With the multi chambers high efficient system offers the ability to make an equal amount of suction during the cutting operation of the whole machine cutting area.

RIGID FRAME & GANTRY

The foundation basis of all Durma laser machines is a rigid stress-relieved welded steel frame construction upon which a stiff gantry axis system moves the cutting head. The design guarantees accurate parts even when cutting with the fastest speeds and under the highest accelerations.

SHUTTLE TABLE

Integrated shuttle tables are incorporated on the laser machine to maximize the productivity and minimize the material handling times. The shuttle table and pallet change system allows convenient loading of new sheets or unloading of finished parts while the machine is cutting another sheet inside the working area . The available shuttle tables on all machine models are fully electric and maintenance free: there are no hydraulic oils to handle and the table changes take place fast, smooth and energy-efficient.

SCRAP CONVEYOR

The optional lateral automatic scrap conveyors allow the removal of scrap pieces from the working area without the need to interrupt the cutting process. The sideways operation of the short conveyors allow for easy maintenance and trouble-free running.

LOADING CELL

Two different lay-outs are possible and the system can be adapted for integration to automatic storages. The CELL is a full-functional system expansion of the laser cutting machine: work queues of several sheets are activated by pressing one single button and there is no separate control panel for the loading/unloading unit. When the productivity of a laser machine needs to be increased or when the material handling and flow in a factory needs to be optimized, the Durma Laser CELL will be the most efficient and most economic solution.

CUTTING TIME & COST CALCULATION REPORT

Efficient working hours of an average laser in Europe

250 days x 16 hours = 4.000 working hours = 4.000 x 3.600 = 14.400.000 sec.

HDF / HDFL BH

(with pipe cutting application)

Laser Pipe Cutting Technical Specifications		
Cutting length	mm	2600mm
Max pipe loading	Kg/m	120
Laser power source	IPG	1-6 KW
Working diameter	Min/Max	Ø50 / Ø400
Max pipe thickness	mm	Up to 12 mm depending on material and laser power
Square profile cutting	Max	150x150 mm
Maximum positioning speed X/Y	m/min	100
Positioning accuracy	mm	+/-0.1
Repeatability	mm	0.1
Materials		Mild steel/Stainless steel/Aluminum/Copper/Brass
Cutting head	-	Precitec
Dust evacuation and filter	-	Available
Axis motors	-	Siemens
Electrical equipments	-	Siemens or Telemecanique
CNC control	-	Siemens
Software	-	Lantek Flex3D Tube
Network Card	-	Optional
Modem	-	Optional

Pipe and tube profile rotation system
 Pipe diameter capacity of $\varnothing 50$ up to $\varnothing 400$
 Square profile capacity of 150x150
 Fume extraction connection
 Adjustable support units for pipe and tube profile

Shapely pipe cutting

Shapely cutting on all
 faces of tube profile.

HDF / HDFL III 3015 SERIES

Improvements for Customer

- Smaller layout
- Automatic front door
- Lower level of cutting table
- New cutting head
- Lighter bridge
- Higher acceleration on Z-axis
- Easier and faster assembly
- Less electric consumption with leds for inner lighting

Technical Improvements

- New optical scale
- New suction unit
- New shuttle table
- Faster table change
- Protection for Z-ball screw
- Better connection between X and Y axis (for linear machine)

TECHNICAL DATA

Tube Cutting Technical Specifications	
Maximum pipe diameter (mm)	Ø170
Maximum square profile dimension	120x120
Maximum rectangular profile dimension (mm)	150x100
Min. pipe-profile diameter (mm)	Ø25
Max. Profile length (mm)	6500
Min. profile length (for automatic loading)	2700
Max. Profile weight (kg/m)	37,5
Max. Material thickness (mm) (for 2 kW)	8
Min. Material thickness (mm)	0,8
Automatic loading	Yes
Automatic unloading	Yes
Cutting Head	2D
Driver mirror amount	1
Centering mirror	Var
Last cut profile left length (mm)	85
Driver mirror linear velocity (m/min.)	120
Driver mirror linear acceleration (m/s²)	10
Accuracy (mm)	±0,05
Repeatability (mm)	±0,05
Profiles can be cut	Round, Square, Rectangular H, C, U, L

LOADING ARM

Profile loading is made by Loading arms outside the cover.
Profile that placed to loading arm automatically move to cutting area and centered.
During cutting next profile placed to the loading arm to save time.
During loading covers open and after loading closed for protection from laser beam.
Light barrier for loading arm does not stop the machine, only stops the loading arm.

CENTERING MIRROR

To get cutting precision, centers the profile as close as possible to cutting head.
Driver turn synchronized with mirror.
4 independent clamps come to position automatically before profile comes.
Centering mirror moves forward and backward on rack and pinion. Because of forward move laser head goes behind the mirror and min. Left material achieved on last profile cut.
Because of backward move with sensor at mirror, loaded profile zero point measured and send to the system.

HYDRAULIC PROFILE HOLDER

It can hold variety of profiles by 4 clamps working independently as 2+2.
Adjust hydraulic pressure automatically according to profile material thickness.
With laser sensor on it measures profile length and send the data to the system.

UNLOADING UNIT

Unloading unit support mechanism height controlled by servo motor and keep supporting profile during cutting.
Because of unloading table that moves forward and backward through profile, cut profile parts can be released to different table according to their lengths.

NOTES

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.
