

# Clear solutions

Your professional partner for development, construction and assembling of filtration systems.

All plants are designed, produced and assembled in our factory.

This means for you:

Broad knowledge and competence from the beginning. One contact person which handles your demands and no compromises concerning quality

All systems are custom-made and are produced by using latest technology

## Applications:

Metal working industry

(Turning/Milling/Grinding/Boring/Honing/EDM)

Filtration of Process water/cooling water from hardening and welding procedures

Rolling (cold and warm rolling)

Drawing (wire, profiles, tubes)

Pre-filtration before membrane filtration

Sludge dewatering/waste water treatment

Cleaning of degreasing liquids

Cleaning of frying oils

Process water from car/truck/railway washing plants

## Central systemes

Turn-key centralized systems including piping to and from machines

Scraper tanks up to 150 m<sup>3</sup> volume

Special rinsing channels for backflow from machining centers

## Belt filter systems

Execution as flad bed/compact belt filters

Optional as pressure and vacuum belt filters

Execution in stainless steel possible

## Lamella separators with or without scraper conveyor

Filtration without using energy

## compact candle filter for fine filtration of low-viscosity oils

Filtration quality according to precoat filtration, but without consumption material

## Multi-layer filters for absolute cleaning of water-like fluids

100% recovery rate of solids, e.g. carbide

Very short time for return on inverstment
