

Most Extensive Line of Laboratory Fume Hoods in the Industry
Reduce Energy costs up to 50% with HEMCO Sash Management 1-2-3,
which provides maximum energy efficiency and user protection.

UniFlow

Laboratory Fume Hoods are available in

1. Constant Air Volume CAV Air Bypass
2. Variable Air Volume VAV Restricted Bypass
3. Explosion Proof models for Hazardous Locations
4. CE models for International Electronic Configurations

Standard Bench Mount and Floor Mount hoods with over 40 standard sizes and custom sizes to your specs. UniFlow Superstructure exclusive unitized dual wall construction for total chemical resistance, strength, and durability. Performance tested to ASHRAE 110 - 1995. U.L.1805 Classified for Fume Hoods & Cabinets, and SEFA1 Recommended Practices for Fume Hoods.

Laboratory Planning Solutions

Welcome to HEMCO

Made in the U.S.A.

HEMCO is the leading manufacturer of innovative laboratory equipment serving the Sciences and R&D Technology Industries since 1958. Located in Independence, Missouri, the heart of America, and the crossroads of North America a major center for transportation, communication, distribution, and manufacturing industries worldwide.

HEMCO's modern manufacturing and distribution facilities combined with our many years of experience uniquely qualifies us to provide laboratory planning projects. Our extensive engineering, design and manufacturing expertise can transform your laboratory ideas into reality.

Ronald E. Hill P.E.
CEO & Co-Founder

HEMCO celebrated it's 50th anniversary in 2008.

"This is quite an accomplishment for a small start up business. We were honored by the Mayor of Independence, and we all cut the ribbon for HEMCO's next 50 years." 2021 is our 63rd year, and as we progress into the next 50 years, we look forward to continued growth and service to the industries we serve.

One of our most important associations over the past 30 years is our membership in SEFA (Scientific Equipment & Furniture Association) which this year marks SEFA's 30th anniversary. HEMCO is proud to be one of the founding members since 1988. SEFA is a growing and preferred association that represents all Laboratory Fume Hood Furniture Manufacturers worldwide.

HEMCO's Membership in Technical Associations, Inspires Innovation

The year 2009 marked a new beginning for HEMCO, we became an ISO 9001:2008 certified company. In 2018 HEMCO became an ISO 9001:2015 certified company. The International Standard Organization is recognized in the USA and 178 countries worldwide. HEMCO's management team has adopted the ISO quality management and procedures into our daily operating system. By continuing to improve manufacturing procedures & operations, it creates efficiency with employee involvement. "We say what we do and we do what we say" We strive to make our customers experience number 1, with our prompt service. Completing projects on time and within budget.

The next year, 2010, HEMCO's UniFlow SE Aire Stream, UniFlow LE & UniFlow CE fume hoods became U.L. classified to U.L. 1805 standards for laboratory fume hoods & cabinets. Underwriter Laboratories have 69 labs and certified testing facilities in the US, and over 100 countries worldwide, with 6,600 employees to service the U.L. clients. U.L. has tested HEMCO HiPel composite fiberglass laminate for chemical & flame resistance and to NFPA 45 for plastics suitable to use in the laboratory. HEMCO's fume hoods are tested to meet U.L. standard 3101 for electrical circuitry & are listed and compliant to U.L. 1805-3101, CSA, and CE classifications.

Consider UniFlow Fume Hoods on your next lab project.

Thank You and as Always Welcome to HEMCO

HEMCO's 50th Anniversary

National Society of Professional Engineers & MSPE Lifetime Member

Scientific Equipment & Furniture Association Lifetime Member

American Chemical Society Chemical Health & Safety Member Since 1989

Laboratory Emergency / Shower Decontamination Booths

Full body emergency shower & eye / face wash, both with immediate response activation handle.

Durable one-piece seamless fiberglass construction with glass smooth white surfaces and coved corners for ease of clean-up.

Emergency showers available with translucent frosted strip curtains, which provides for easy access into booth, while containing contaminated water splash.

Stainless steel Grab bars located on right & left sides to support victim and rescue personnel during decontamination, included.

Plumbing is provided, for installation by local certified plumber. Plumbed to single point 1.25" IPT. connection. Tempered warm water supply connection 20 GPM water supply is required.

Raised fiberglass deck with self draining containment basin, and 2" diameter drain outlet located on either the bottom or rear of unit.

Industrial Applications Emergency Drench Shower Booth
unit is equipped with pull rod activated overhead drench shower and rear wall mounted eye/face wash.
Cat No. 16601

Laboratory Applications Emergency Drench Shower Booth
same specs as above except with finished exterior side panels.
Cat No. 16604

Alarm Horn & Light
Audible warning sound when system is activated by flow switch. Top mounted visual warning light when system is activated.
Cat. No. 16680

Hand Held Body Wash
Squeeze valve nozzle on 8' coiled hose and bracket. Can be used to rinse all body parts while victim is sitting or lying down. Wall or hood mounted, 3/8 NPT, barrier free.
Cat No. 16005

Swing-Out Eye Wash
Deck mounted next to sink. Activates when pivoted. 1/2" NPT. Barrier free.
Cat. No. 16009

Hand Held Eye/Face & Body Wash
Mounted on the front side-wall of the fume hood. Includes 8' hose and surface escutcheon. 3/8" NPT. barrier free.
Cat. No. 93966

Cat. No. 16601 For Industrial Applications shown above

Note: OSHA & ANSI require that emergency shower is to be located within 10 seconds walking time from the hazardous site location.

Overhead Drench Shower
Shower unit features 10" diameter plastic head and 1" IPS brass "stay open" valve with rigid pull rod and handle. **Cat. No. 16088**

Eye/Face Wash
Wall mounting unit features two large plastic heads, push plate operated "stay open" ball valve. 1/2" IPS inlet, and 1.25" IPS drain. **Cat. No. 16006**

Eye and Face Wash Options

Canopy Hoods

Canopy hoods are designed to collect and exhaust corrosive vapors, heat, steam, and odors when mounted over areas with water baths, hot plates, or portable equipment. Standard color: Lab White

Wall Canopy Hoods (FRP or stainless steel, Includes wall mounting kit) (custom sizes available)

Side Wall Panel
(fiberglass or stainless steel)
kit includes one wall panel
and hardware.
Cat. No. 23000

Rear Wall Panel
(consult chart for Cat.No.)

**Vapor Proof Light
& Switch Cat. No. 50035**

**Blower Switch 115V/15A

UniFlow AireStream Laboratory Fume Hoods

- ✓ HEMCO offers a complete line of UniFlow laboratory fume hoods. Bench-mounted hoods in widths from 24" to 96". Floor-mounted (walk-in) hoods from 48" to 144" wide and up to 96" deep. UniFlow fume hoods are designed for performance, user protection, & save 50% on reduced energy cost.
- UL CLASSIFIED 1805 U.L., Underwriters Laboratory U.L. 1805 for fume hoods & cabinets, this classification covers construction, materials, flammability, & containment. U.L. 3101 electrical performance is tested using HIPOT testing, (high potential high voltage). HEMCO's test facility is compliant to test fume hoods for U.L.1805 Classification.
- ✓ CSA, Canadian Standards Associations CAN/CSA - C22.2 compliant for electrical components
- ✓ CE European Conforming International Electrical Configuration
- ✓ OSHA, Occupational Health & Safety Federal Register 29 CFR part 1910. Part 1910 recommends equipping hoods with an air flow monitor.
- ✓ SEFA, Scientific Equipment Furniture Association, SEFA 1-2010 recommended practices for fume hoods
- ✓ ASHRAE, American Society of Heating, Refrigerating and Air-Conditioning Engineers, ASHRAE - 110, 1995
- ✓ ANSI, American National Standards Institute, Z9.5, 2012 Laboratory Ventilation
- ✓ ASTM, American Society for Testing and Materials ASTM E-84, 2001
- ✓ NFPA, National Fire Protection Association, NFPA - 45, 2000
- ✓ ISO 9001: 2015 Certified Company
- ✓ UniFlow Fume Hoods are listed on ARCAT.com
- ✓ 5 year warranty on all UniFlow SE, LE & CE AireStream models which are U.L. 1805 classified, guaranteed

NEW UniFlow SL AireStream Fume Hoods
UniFlow fume hoods are designed for performance, user protection, & save 50% on reduced energy cost. With exclusive Vector airflow slots to maintain airflow through the fume chamber.

Advantages of UniFlow CAV Bypass Fume Hoods

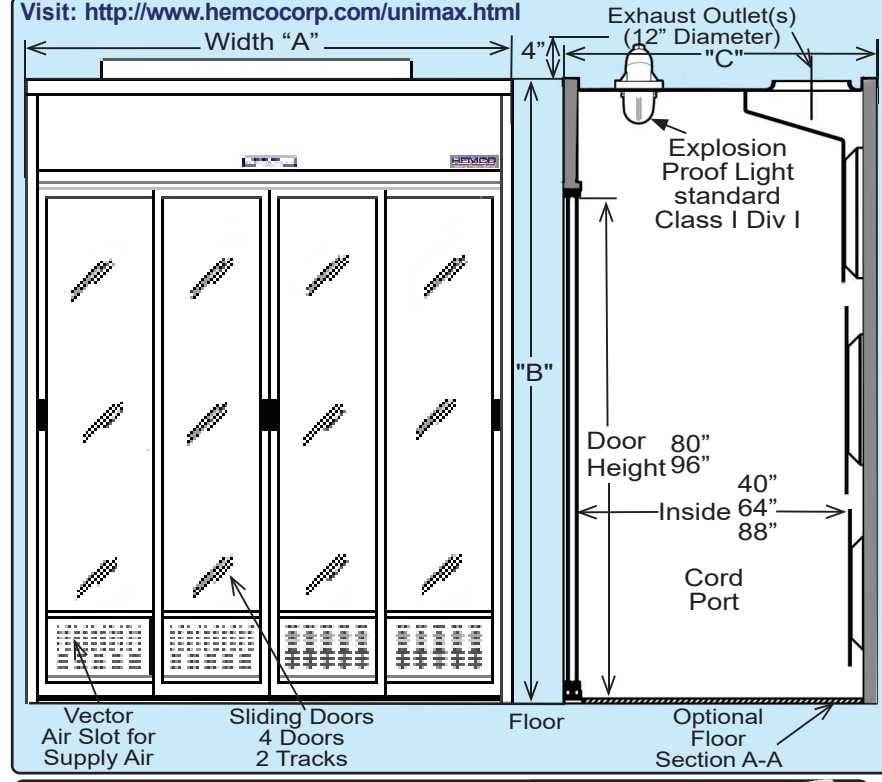

Cut Energy Costs up to 50%, by reducing the size of the blower & ductwork required, while lowering installation costs.

1. Important: by incorporating Sash Management 1-2-3, you are saving 50% on overall energy costs, and providing the best possible user protection & safety. (see page 7)
2. Recommended that hoods be used with sash 1/2 open with face velocity of 80-100 FPM. Sash stop located at 1/2 open position. With upper sash raised to the 1/2 open position the supply air CFM & static pressure are as noted.
3. Sash in full open position should be for setup of apparatus & maintenance service only. If design opening is at 1/2 open at 100 FPM, face velocity at full open would be approximately 50 FPM. The recommended face velocity for efficiency & safety is 80-100 FPM. Lower face velocity may compromise user safety.
4. When hood is not in use, keep sash in closed position.
5. Sash stops are standard on U.L. Classified Fume Hoods. UniFlow SE, LE and CE AirStream fume hoods
6. The Sash Stop is designed for user protection and CFM reduction. Allows sash to open to a maximum of half open, providing up to 50% energy savings.
7. Sash at full open is primarily designed for set-up of equipment and maintenance. Fume hood users should wear personal safety protection equipment, consult Lab Safety Officer.
8. HEMCO recommends 10-12 room air changes per hour for the health & safety of personnel. Example 10' X 20' room 10' high receiving 10 room air changes per hour requires 350 CFM air flow through the lab.
9. At an average utility rate of \$7.00 per CFM, a typical annual savings on a 4' fume hood would be \$2705.00 and on a 6' fume hood \$4067.00, by using Sash Management 1-2-3., Sash Stop at 50% open.

Standard Color is Lab White, other colors are available.

Fume Hood Fire Suppression System for UniMax

Recommended for potentially flammable or volatile applications. System is designed to meet various fire classifications and sized to fit the specific interior cubic dimensions of UniMax.
(consult factory for details)

UniMax FM Hoods Modular Construction

UniMax Floor Mounted Hoods are supplied in standard models from 6' to 24' wide, with various depth and height options. The unique modular construction features 2" thick walls that have chemical and fire resistant composite resin U.L. 1805 compliant surface panels, and meets ASTM E-84. This also allows the hood to ship knockdown and be moved through standard lab entry doors for easy on site assembly.

UniMax Explosion Proof Lighting Options

Explosion Proof Light Fixture UL listed. Class I Div II Groups A,B,C,D, Class II Div II Groups F & G. For use in hazardous locations. (bulb not included) 115V or 230V. not wired. **Cat. No. 50034**

Explosion-Proof Light Fixture UL listed. Class I Div I Group C,D, Class II Div I Group E, F,G. For use in hazardous locations. Accepts bulb up to 300 watts, (bulb not included) 115 / 230V. not wired. **Cat. No. 50038**

UniMax Entry Access Door Options:

- Add FG, FS, SC suffix to model number.
- FG – Framed Glass Door with Overhead Sliding Track**
- FS – Framed Glass Door with Floor Sliding Track**
- SC – Strip Curtains**

HazMax Spill Containment Basins

HazMax spill Basins are designed to be used with UniMax Floor Mounted Hoods. Basins feature a molded one-piece seamless composite resin spill containment basin. The basin is 8" high and includes a raised fiberglass deck grating.

- ✓ Lower basin is of molded one-piece seamless chemical resistant composite resin construction to safely contain accidental spillage.
- ✓ Raised deck grating is of chemical resistant fiberglass material that allows spillage to flow through to basin below, self draining can be accommodated. Containment basin can be engineered to contain a specified volume of liquid.
- ✓ Engineered to meet the anticipated weight loads.
- ✓ Convenient lift out grating allows access to basin for cleaning and decontamination.
- ✓ Lower basin can be engineered to accommodate fork lift requirements.

UNIMAX FLOOR MOUNTED (WALK-IN) FUME HOODS

UniMax Floor Mounted (Walk-in) Hoods are designed to safely isolate equipment, materials, and procedures from the surrounding area and exhaust hazardous fumes.

UniMax 16'w X 6'd X 12'h
LED lighting, FG framed glass door with overhead sliding track, & center wall divider.
Cat No. 161072

UniMax FM Hoods Modular Construction

UniMax Floor Mounted Hoods are supplied in standard models from 6' to 24' wide, with various depth and height options. The unique modular construction features 2" thick walls that have chemical and fire resistant composite resin U.L. 1805 compliant surface panels, and meets ASTM-E-84.

This also allows the hood to ship knockdown and be moved through standard lab entry doors for easy on site assembly.

Engineered To Meet Your Project Requirement

Equipped with vapor proof fluorescent light, LED, or, explosion proof light fixtures that are available, in 115V 60Hz or 230V 50Hz electrical service. All factory installed.

UniMax Entry Access Door Options:

Add FG, FS, SC suffix to model number.

FG – Framed Glass Door with Overhead Sliding Track Supplied with (4) doors on (2) tracks, doors slide horizontally in an overhead track.

FS – Framed Glass Door with Floor Sliding Track Supplied with (4) doors on (2) tracks, doors slide horizontally in a lower floor track. The floor track threshold is 0.75" high.

SC – Strip Curtains Clear vinyl strip curtains provide containment in addition to the ability to move drums, cylinders, or equipment easily through for processing or storage.

Traditional Fume Hoods vs UniFlow Fume Hoods

Innovation is the Difference Between the Same Perspective and an Entirely New one.

The 1925 Ford Tri-motor, featured all metal construction, no wood. Its fuselage and wings were constructed of corrugated sheet metal, for strength. These aircraft were well-designed, and reliable (for the era).

The Boeing 787 Dreamliner features aerodynamic composite construction. Composites have a higher strength to weight ratio, which helps to make the 787 a lighter more energy efficient aircraft.

Traditional Fume Hoods	1. Fully Assembled Fume Hoods	UniFlow SE Fume Hoods
 <p>Wt 435 lbs</p>	<p>Traditional Fume Hood 60" wide Constructed of formed painted sheet metal panels & held together with sheet metal fasteners & brackets. Chemical resistant interior liner panels with sharp corners sealed with caulking. 1 year warranty. Heavy, challenging installation. Weight 435 lbs</p> <p>UniFlow SE Fume Hood 60" wide Unitized composite superstructure for total chemical resistance. non-metallic construction (NO RUST). Interior fume chamber one-piece glass smooth, all covered corners for ease of cleaning, 5 year warranty. Unitized construction reduces weight for ease of installation. Weight 265 lbs Weight savings difference = 170 lbs</p>	 <p>Wt 265 lbs</p>
 <p>Wt 435 lbs</p>	<p>Traditional Fume Hood 60" wide 170 bolts, nuts and screws removed. 14 painted sheet metal panels with fasteners & brackets removed. 8 flat composite liner panels, no caulk to seal cracks, includes sash assembly & 36" fluorescent 2 bulb T-8 light fixture with steel painted white reflector. Weight 435 lbs</p> <p>UniFlow SE Fume Hood 60" wide Unitized construction for superior durability and long life (NO RUST). Meets NFPA 45 for fire resistance in laboratories. Includes sash assembly & Vapor proof LED light fixture with polished Stainless steel reflector. Weight 265 lbs Weight savings difference = 170 lbs</p>	 <p>Wt 265 lbs</p>
 <p>Flat Panels Wt 139 lbs</p>	<p>Traditional Fume Hood 60" wide 8 composite liner panels to fabricate fume chamber. No caulking or sealant in corner cracks. The ceiling panel shown with sheet metal vent outlet. Sash assembly and light assembly removed. Weight 139 lbs</p> <p>UniFlow SE Fume Hood 60" wide Unitized composite superstructure for total chemical resistance. non-metallic construction (NO RUST). Interior fume chamber one-piece glass smooth, all covered corners no joints, 5 year warranty. Unitized construction reduces weight for ease of installation. Sash assembly and light assembly removed. Weight 210 lbs</p>	 <p>Wt 210 lbs Unitized Superstructure</p>

Customer Comments:

Based on the nature of the products we analyze (sulfur chlorides, sulfuric acids, oleums), fume hoods last about two to three years. At the end of three years the chemicals have corroded both the exterior steel panels and the internal steel frame work of the metal hoods. We replaced them eight years ago with HEMCO UniFlow fiberglass fume hoods. The installation was easier, and we have had no repairs since then. We are building a new facility, and we plan to install HEMCO hoods.

Steve Mixon, Chief Chemist

NEW UniFlow SL Fume Hoods 54 inches high

The "NEW" SL series of fume hoods features new dimensions of 54" high OD and 48" high ID. This high performance fume hood features our signature All composite construction for total chemical and fire resistance. With VaraFlow Vector baffle system. Visit: <http://www.hemcocorp.com/sl.html>

EnviroMax HEPA Laminar Flow Workstations

EnviroMax HEPA Filtered Clean Work Enclosures Laminar Flow Benches protects processes

HEPA Filtered Enclosure offered in Unitized & Modular Design for Class 100 Clean Work Station

Specifically engineered to meet critical clean specifications by isolating equipment and procedures. The HEPA filtration eliminates particles 0.3 or larger to an efficiency of 99.995%, class 100 laminar airflow maintains a sterile work zone. Filters and lighting are conveniently changed from inside the enclosure. Optional U.V. lighting, anti-static and grounding options are available.

EnviroMax HEPA Filtered Options

- Access on any or all sides • Multi-plug strips • Magnehelic gages • cord port • base cabinets • Other materials of construction • Anodized aluminum & stainless steel framing • Electrical and key lock services • Support benches & Work surfaces •

Unitized EnviroMax HEPA Filtered Clean Workstation. Sizes are 4', 5', 6', & 8' wide by 60" high

Project: Wyeth / Pfizer
EnviroMax laminar flow enclosure size: 72" wide X 36" deep X 60" high with UV light, & standard base table

Unitized design with depth of 30" and 36" to allow passage through doorways for easy on-site set-up. HEPA filters provide sterile clean airflow through work area with air returned to room space. Pre-wired electrical connection to a single point junction box. Work surfaces & support benches available.

Note: Custom sizes are welcomed.

Unitized EnviroMax Specifications Clean Workstation

Superstructure is welded steel framework with chemical resistant white powder coated finish. Side and rear walls are of clear acrylic or tempered glass. The front comes equipped with horizontal slide windows with air outlet slots on sides and front to maintain positive pressure. HEPA filters are ceiling mounted in the enclosure and designed to maintain a minimum of class 100 environment. HEPA filters are 99.99% efficient at .3 micron HEPA filter module has an integral fan, prefilter, and speed control. Fluorescent lighting is provided, switches are located on the front post. Provides an economical and flexible work space that exceeds stringent contamination requirements. All electrical components are U.L. listed.

Modular EnviroMax HEPA Filtered Clean Workstation. Sizes are 6', 8', 10' & 12' wide by 48" & 60" deep by 60" high

Project: Medtronics
Unitized EnviroMax 96" wide X 36" deep X 60" high, base table 96" wide X 36" deep X 36" high, with sliding sashes front and back and side hinged sashes

Modular design with depths of 48" & 60" for on-site assembly prior to setup and electrical connection. HEPA filters provide sterile clean airflow through work area and returned to room air space. Pre-wired electrical connection to single point junction box. Under the bench storage and shelving designed to suit your requirements.

Note: Custom sizes are welcomed.

EnviroMax Vented Exhaust Enclosures

EnviroMax Vented Exhaust Enclosures protects personnel & containment processes

A Vented Exhaust Enclosure in Unitized & Modular Designs for exhausting fumes from Robotic & Automated processes

Designed to protect personnel from potentially hazardous fumes, vapors and odors. The enclosure can connect to in-house exhaust system or a dedicated exhaust blower, to provide the internal negative pressure needed to safely remove hazardous fumes from the work area. Air supply into the enclosure is supplied from the surrounding lab environment.

EnviroMax Options

- Access on any or all sides • Multi-Plug strips • Exhaust blowers • Vertical slide or hinged doors • Base cabinets • Exhaust HEPA or carbon filters • Other materials of construction • Anodized aluminum & stainless steel framing • Plumbing and electrical service fixtures • Airflow Monitors • Support benches & work surfaces • Accessories

For more information request the EnviroMax Enclosures for Robotic and Automated Lab Processes Brochure.

Unitized design with depth of 30" and 36" to allow passage through door ways for easy on-site setup. Viewing from all four sides of the enclosed system. Access to interior of enclosure, available from any or all sides. Vent duct sized to airflow requirements. Pre-wired electrical connection to single point junction box. Under the bench storage and shelving designed to suit your requirements. Note: Custom sizes are welcomed.

Project: National Forensics & Coroners Complex, Canada
EnviroMax enclosure, unitized 120" wide X 36" deep X 48" high, with custom acid storage cabinets

Unitized EnviroMax Vented Exhaust Enclosure

Superstructure is welded steel framework with chemical resistant white powder coated finish. Side and rear walls are of clear acrylic or tempered glass. Ceiling is constructed of molded composite resin with the outlet duct connection collar sized for desired air volume. Slotted ceiling baffle allows air to flow evenly through the interior area into the exhaust plenum. The front of the enclosure features horizontal sliding shatter-proof clear viewing panels, (4) panels on (2) tracks allowing access at any position. Fluorescent light is factory installed and sealed behind a clear lens. Light switch is mounted on the front post. Provides an economical and flexible work space that exceeds stringent contamination requirements. All electrical components are U.L. listed.

Modular design with depth of 48" or 60" requires on-site assembly prior to setup and vent ducting. Pre-wired electrical connection to single point junction box. Work surface and support benches and cabinets sized to specifications. Provides an environment free of contamination for sensitive processes. Note: Custom sizes are welcomed.

Project: National Forensics & Coroners Complex, Canada
EnviroMax Modular enclosure size: 60" wide X 60" deep X 120" high with work surface & 60" wide X 60" deep X 24" high support table

Modular EnviroMax Vented Exhaust Enclosure

Superstructure is welded steel framework with chemical resistant white powder coated finish. Side and rear walls are of clear acrylic or tempered glass. Ceiling is constructed of molded composite resin with the outlet duct connection collar sized for desired air volume. Slotted ceiling baffle allows air to be drawn out evenly across the width of the interior into the exhaust plenum. The front of the enclosure features horizontal sliding tempered glass panels, (4) panels on (2) tracks allowing access at any position. Fluorescent light is factory installed and sealed behind a clear lens. Light switch is mounted on the front header panel. All electrical components are U.L. listed.

UniFlow CE AireStream Fume Hoods 45 inches high

When space is limited, the CE series of fume hoods is designed with a 24" depth in models from 30" to 72" wide. These efficient CE Fume hoods provide you with the benefits of a full size fume hood with a space saving size. With VaraFlow Vector baffle system. Visit: <http://www.hemcocorp.com/cefh.html>

UniFlow Auxiliary Air Fume Hoods 59 inches high

The energy saving Auxiliary Air Fume Hood requires zero room air. This is because the auxiliary air supply is equal to the CFM exhaust of the hood - thus zero room air is required. With sash at an 1/2 open operating position and a face velocity of 100 fpm, the supply equals the exhaust; which makes up for insufficient room air availability and by not exhausting expensive existing tempered room air. Visit: <http://www.hemccorp.com/aux1.html>

Cabinet Lock
Five-Disc tumbler door & drawer cam lock & (2) keys.
Cat. No. 75001

Utility Chase
24" wide x 6" deep x 84" high. Located on an island behind a sink. Used to conceal piping and to serve as mounting for pegboard.
Cat. No. 75091

Rear Filler Panel
35" high x 7" wide. Used to enclose pipe chase behind cabinets on standard 30" deep counters.
Cat. No. 74112

Center Filler Panel
35" high x 4", 10", or 14" wide. Used to enclose the pipe chase at the end of an island. Please specify width.
Cat. No. 74122

Front Filler Panel
35" high x 2", 6", or 12" wide. Used to enclose the space between cabinets to meet casework length requirement. Please specify width.
Cat. No. 74142

End Scribe
35" high x 2", 6", or 12" wide. Used to fill the space between the end of casework and a wall. Please specify width.
Cat. No. 74001

UniLine Base Cabinets

Lab cabinets are offered in standard modular sizes that allow you to create a custom laboratory to meet your specific needs. Cabinets feature furniture grade welded steel construction with a durable, chemical resistant, epoxy powder coat finish that meet or exceed SEFA 8, recommended practice for laboratory casework. Other colors available to suit your requirements. (available in ADA height and Stainless Steel or Polypro)

UniFlow Perchloric Acid Fume Hoods 59 inches high

UniFlow Perchloric Acid Fume Hoods feature either a type 316 stainless steel or PVC one-piece fume chamber with integral worksurface and are engineered for the safe handling of perchloric acids in laboratory procedures. Perchloric Acid Hoods are offered in sizes 48", 60", & 72" widths and include a dedicated wash down and exhaust system. Note: Perchloric Acid Hoods are for perchloric acid use only. Visit: <http://www.hemcocorp.com/perch.html>

1. UniFlow 316 Stainless Steel Perchloric Acid Laboratory Fume Hood: Seamless type 316 stainless steel fume chamber with integral worksurface and drainage trough with baffle and exhaust collar. Hood has built-in wash down system with spray nozzles and piping to front mounted control valve. In widths of 48", 60", 72", Depth of 30", 36" and height 60.25". Explosion proof light fixture and control switch are wired to a single point junction box, 115/60Hz. see page 11. All electrical components are U.L. listed.

2. UniFlow PVC Perchloric Acid Laboratory Fume Hood: Seamless PVC fume chamber with integral worksurface and drainage trough, with baffle and exhaust collar. Hood has built-in wash down system with spray nozzles and piping to front mounted control valve. Picture frame sash opening with counterbalanced clear tempered safety glass sash with chemical resistant PVC framing, track, and aerodynamic sash lift. Explosion-proof light fixture Cat. No. 50034, installed but not wired, 115/230V, 50/60Hz AC, Class I Div II Groups A B C D, Class II Div II Groups F&G, all electrical components UL listed.

UniFlow HDPE Acid Digestion Hoods 59 inches high

UniFlow HDPE Acid Digestion Fume Hoods feature a one-piece fume chamber with integral reinforced work surface, and baffles constructed of High Density Polyethylene. Digestion hoods come in 48", 60" & 72" widths & feature a dedicated wash down & exhaust system. Visit: <http://www.hemcocorp.com/pvcad.html>

UniFlow MLX Fume Hoods 59 inches high

The UniFlow MLX series of Fume Hoods are designed and built to accommodate larger equipment and procedures that traditional fume hoods cannot handle. MLX hoods range in size from 60" to 120" wide and 30" to 48" in depth. The MLX series of fume hoods are offered in CAV and VAV models. The modular construction allows the hood to be disassembled. With VaraFlow Vector baffle system. Visit: <http://www.hemcocorp.com/mlx.html>

48"	65541	65641	65841	651041	
1.UniFlow MLX AireStream CAV Fume Hood: Air By-pass low flow, constant air volume hood. Dual wall modular construction, all non-metallic corrosion and fire resistant composite fiberglass construction. AireStream VaraFlow baffle system with vector slots and transition bell exhaust connection. In widths of 60", 72", 96", 120", Depth of 30", 36", 48" and height 59". Vapor proof LED light fixture and control switch are wired to a single point junction box, 115/60Hz. see page 11. All electrical components are U.L. listed.					
2.UniFlow MLX AireStream VAV Fume Hood: Same as #1 above except equipped with variable air volume VAV restricted by-pass feature in place of CAV by-pass feature. Ducting must be connected to optional VAV exhaust system controls.					
3.UniFlow MLX AireStream Fume Hood with Explosion Proof Light: Same as #1 above except, equipped with explosion proof vapor proof light fixture.					
4.UniFlow MLX AireStream Fume Hood: Same as #1 above except equipped to comply to international electrical configuration.					
5.Horizontal Sliding Sash Option: Add suffix to number above		65HS-5	65HS-6	65HS-8	65HS-10

SASH OPTIONS

Horizontal Sashes
Max opening is 50%, (4) panels on (2) tracks, conveniently lift out for equipment set-up or cleaning. For 50% reduction of air supply.

Combination Horizontal/Vertical Sash Offers the advantages of both sash types. Horizontal sash offer energy savings while vertical option allows full access to the fume chamber. Frame is of type 304 stainless steel.

72" CAV Fume Hood vs 72" VAV Fume Hood

- The CAV with Constant Volume exhaust blower (592 CFM), maintains 100 FPM face velocity at 1/2 open safety position.
- The VAV fume hood would need to be equipped with a variable volume exhaust system to maintain 100 FPM at any sash opening height. At Sash full open the CFM is 1162

UniLine Furniture Groupings

Unitized design incorporates our most popular casework groupings to meet your laboratory needs. Welded steel with chemical resistant, epoxy powder coat finish, and 1" thick phenolic resin countertops, 4" high backsplashes, and flush ends standard. ADA and sitting height options are available. Standard color: Lab White

Gemini Student Grouping

UniLine Gemini grouping features a sitting height desk area that can be incorporated with any of the HEMCO groupings. Cabinet grouping includes 1 sitting height file drawer cabinet with rear filler panels, single drawer apron, and phenolic resin worksurface. Sitting height 28".

Example of (7) Gemini Groupings

ADA

Freedom (ADA) Grouping Option

When ADA requirements are necessary, the UniLine Freedom Grouping option allows you specify any HEMCO casework grouping and be compliant to all dimension, space, and access standards as specified by ADA. In addition, all electrical services, plumbing accessories and safety equipment including emergency showers and eye wash stations are designed to meet ADA guidelines. Counter top height is 34". For ADA recommended reach see diagram 1 and 2.

Diagram #1
Reach In

Diagram #2
Reach Over

Simply add "ADA" as a suffix to any HEMCO part number and HEMCO can design, quote, and supply ADA compliant equipment. Proper planning eliminates/reduces future problems. For a complete guide for all ADA technical information, including dimensions and standards, please visit: www.access-board.gov.

Corner Grouping Solutions

HEMCO corner cabinets and fillers offer several means by which HEMCO casework groupings or individual cabinets can be connected at a corner, eliminating unused corner space.

SE & LE Fume Hood Worksurfaces & Base Cabinets

A complete line of worksurfaces and cabinets to suit any application from economical light duty to heavy acid and solvent use. Select the worksurfaces and cabinets that meet your laboratory's requirements. Standard sizes are listed below. HEMCO's technical staff can make recommendations to suit your needs.

(UniFlow SE, LE hoods only) Epoxy Resin, color: black, 1.25" thick, .375" dished

Epoxy Resin Worksurfaces are recommended for general laboratory work where greater chemical resistance is required. Surface is dished 3/8" to contain spillage. Worksurface is cast of thermosetting epoxy resin, creating a molded solid 1.25" thick top which is extremely hard, abrasion and heat resistant. Tested to UL 1805 classification.

Size	Cat. No.	Size	Cat. No.
36"W x 30"D	20315	36"W x 36"D	20325
48"W x 30"D	20415	48"W x 36"D	20425

96"W x 30"D	20815	96"W x 36"D	20825

(UniFlow SE, LE) Phenolic Resin, color: black, 1.25" thick, dished .25"

Phenolic Resin Worksurface are recommended for general laboratory work where high concentrations of solvent, acids and alkalis are being worked with. Work surface combines excellent chemical resistance scratch and wear resistance. Surface is flat 1.25" thick, dished .25". Tested to UL 1805 classification.

Laboratory Furniture Groupings

UniLine design incorporates our most popular casework groupings to meet your laboratory needs. Welded steel with chemical resistant, epoxy powder coat finish, and 1" thick phenolic resin countertops, 4" high backsplashes, and flush ends standard. Standard height 36", ADA height 34", and sitting height 28" options are available. Standard color: Lab White. (see page 1) Groupings can be supplied with optional Fume hoods.

Atlantis Grouping

Atlantis Grouping provides basic lab storage & a versatile work area. Cabinet grouping includes 3 standing height cabinets with rear filler panels on both ends, phenolic resin worksurface 36" high, with 4" high back splash. Includes 16" X 12" X 8" sink and H/C gooseneck faucet.

Atlantis Cabinet Grouping

12'	48"	48"	48"	70013	70023

Enterprise Grouping

Enterprise Grouping provides a convenient balance of storage and work space. Cabinet grouping includes 3 standing height cabinets with rear filler panels, 2 wall cabinets, phenolic resin worksurface 36" high, with 4" high back splash. Includes 16" X 12" X 8" sink, 30" X 30" pegboard and H/C gooseneck faucet.

Endeavour Island Grouping

Endeavour Grouping is a flexible design that can serve as an island or peninsula layout. Cabinet grouping includes either 3 or 7 standing height cabinets with front and end filler panels, phenolic resin worksurface, and center island reagent shelf with pedestals and phenolic resin shelf. Includes 16" X 12" X 8" sink, 30" X 30" pegboard and H/C gooseneck faucet.

HEMCO Plan-A-Lab Worksheet showing Groupings

The HEMCO Plan-A-Lab enables you to conveniently lay out your lab furniture and your pre-engineered modular clean lab. For more information request the Modular Clean Room Brochure. Shown below is a 20' X 24' (2) wall system. Existing walls in black, new walls in yellow.

For Lab Planning worksheet visit: www.hemcocorp.com/images/Literature/PlanALab.pdf shown above 20' X 24' (2) wall system

UniLine Laboratory Casework Construction (SEFA 8 Compliant)

UniLine Casework is constructed of welded 18 gauge steel. Base cabinets have a load capacity of 500 pounds per linear foot. Powder coat finish is environment friendly, attractive and long lasting, color: Lab White. UniLine casework, quality & style for your laboratory. Casework is tested independently to be SEFA 8 compliant.

Drawers extend to 18" full open, Interchangeable, interlocking drawer head, sound deadened for quiet operation. One piece drawer body with radiused bottom for easy cleaning. 150 pound dynamic drawer slide assembly mounted on welded channel assemblies. Interior is powder coated steel, stainless steel interior is optional.

Doors One-piece double wall construction painted before assembly. Insulated door filler for added rigidity and quiet operation. Rubber door bumpers. Powder coated finish.

Cabinet Interior Minimal holes in front post for aesthetically pleasing appearance. Hem and flatten door. Adjustable shelves heavy duty stop for secure closure. Full length & width adjustable shelf for maximum storage. Unique triangular support rails for added strength. Heavy duty plated steel shelf clips. Powder coated finish. Cabinet interior bottom with a radius flange for increased strength and ease of cleaning.

48" Cabinet shown
Cat. No. 71064

Rear Filler Panel
Cat. No. 74112

Recessed Toe Space 4 inches high 3-1/2 inches deep, promotes laboratory cleanliness. Cabinet base lower corner reinforcing gusset with 0 to 2-1/2" adjusting levelers on (all four corners). Cabinet height adjustable from 35" to 37".

Fume Hood Wall Mounted Plumbing Fixtures

Fume hood remote control service fixtures feature epoxy coated brass, chemical resistant, color-coded, serrated hose connections, and 3/8" NPT brass valves with rod and handle assembly. Plumbing fixtures are factory installed on hood, they can be pre-plumbed if specified. Please specify service required, fixture location, and inside or outside service access panels. Conforms to ANSI Z21.15.

Service Fixture Color Code Chart	Green - Cold Water	Red - Hot Water	Blue - Gas	Orange - Air
	Yellow - Vacuum	Brown - Nitrogen	Black - Steam	White - Deionized Water

Service Set of Two (specify left or right mounting)
Two remote controlled service fixture set. Color-coded index buttons with matching color-coded serrated tip. Specify service required. Epoxy coated brass.
Cat. No. 50121-FS

Service Set of Four (specify left or right mounting)
Four remote controlled service fixture set. Color-coded index buttons with matching color-coded serrated tip. Specify service required. Epoxy coated brass.
Cat. No. 50141-FS

Service Set of Six (specify left or right mounting)
Six remote controlled service fixture set. Color-coded index buttons with matching color-coded serrated tip. Specify service required. Epoxy coated brass.
Cat. No. 50161-FS

DI Faucet
Pure water 6" rigid PVC goose neck.
Cat. No. 50019

DI Faucet
Pure water 6" swivel tin-lined gooseneck. Epoxy coated brass.
Cat. No. 50022

Gooseneck PVC Service Fixture
Wall mount, no valve, constructed of PVC.
Cat. No. 51110

Service Fixture
Cold water, remote controlled epoxy coated brass turret.
Cat. No. 50012

Water Faucet with Vacuum Breaker
Cold water 6" swivel goose neck. Epoxy coated brass.
Cat. No. 50023

Water Faucet with Vacuum Breaker
Cold water remote controlled 6" swivel gooseneck. Turret & gooseneck are epoxy coated brass.
Cat. No. 50113-CW

Water Faucet
Cold water remote controlled 6" swivel gooseneck. Turret and gooseneck are epoxy coated brass.
Cat. No. 50112-CW

Service Fixture
Remote controlled single service outlet. color-coded index buttons with matching color coded serrated tip outlets.
Cat. No. 50013

Base Fixture
Deck or wall mount, 3/8 NPT remote, no valve. PVC.
Cat. No. 51013

PVC Lab Turret
Deck or wall mount, 3/8 NPT, no valve, PVC.
Cat. No. 51012

Mix Faucet
Hot and cold remote controlled 6" swivel gooseneck. Turret and gooseneck are epoxy coated brass.
Cat. No. 50102

Mix Faucet
Hot and cold water remote controlled turret. Turret is of epoxy coated brass.
Cat. No. 50101

High Flow Water Valve, Straight Pattern
Ball valve construction with quarter turn open / close, used for supply and return connections.
Cat. No. 51023

Single Keycock
Single flange mounted needle valve, keycock with integral flange and shank connection. Epoxy coated brass. 3/8" NPT with lock nut.
Single Cat. No. 50025
Double Cat. No. 50125

Aspirator
3/8" NPS male inlet
Epoxy coated brass.
Cat. No. 50058

External Mounted Vacuum Breaker
Breaker with 3/8" IPS inlet and outlet. Chrome plated brass.
Cat. No. 50044

Fume Hood Electrical Services

Electrical services are UL, CSA & CE listed. They come factory installed, wired to a single point junction box when ordered with fume hoods. Services must be wired to comply with local codes.

Fume Hood Electrical Services (UL)

	Duplex Receptacle 115V single phase receptacle. Installed on front column of fume hood. Includes junction box and cover plate. UL listed.		Single Receptacle 230V single phase receptacle. Installed on front column of fume hood. Includes junction box and cover plate. UL listed.		GFI Duplex 115V consists of combination ground fault interrupters, 3-wire polarized grounded. Includes junction box & cover plate. UL listed.		Data Port Cat 6, 10 gigabit ethernet, (2) port fixture. Installed on front column. Cabling not included.
15 amp shown		20 amp shown		15 amp shown			Cat No. 50053

	230V 20 amps		50027-3				

Fume Hood Vapor Proof Light Fixtures (UL)

	Vapor-Proof Light Factory installed. Accepts bulb up to 150w, 115V, & LED UL listed, (bulb not included) Standard on CE, Canopy, Universal and EcoFlow hoods.		Vapor Proof LED Light Fixture LED fixture with Stainless steel reflector, (2) tube, 115V, UL listed. (LEDs included) LED has a 50,000 hour average life span. Standard on SE and LE Fume hoods.		Fluorescent Lighting T-5 fixture with Stainless steel reflector, (2) tube, 115V/230V tubes changed from the outside. (fluorescent tubes are included) UL listed. Optional on SE and LE Fume hoods.
	Cat. No. 50035	24 inch.....	Cat. No. 51124	24 inch.....	Cat. No. 50224
		36 inch.....	Cat. No. 51136	36 inch.....	Cat. No. 50236
		48 inch.....	Cat. No. 51148	48 inch.....	Cat. No. 50248

Fume Hood Explosion Proof Light Fixtures and Services (UL)

	Explosion-Proof Light Std Class I Div II For use in hazardous locations. Gray, two-coat epoxy finish with easily removed prismatic globe. Factory mounted, not wired. Accepts compact fluorescent or LED, (bulb not included) 115V /230V UL listed. Class I Div II Group A, B, C, D Class II Div II Group F & G		Explosion-Proof Fixture Class I Div I For use in hazardous locations. Gray, two coat epoxy finish with easily removed prismatic globe. Accepts compact fluorescent or LED, (bulb not included) 115V/230V. Factory mounted, not wired. UL listed. Class I Div I Group C, D, Class II Div I Group E, F & G		Explosion-Proof Fluorescent Lighting Class I Div I fixture is (2) tube, 115V/230V with tubes changed from the outside. UL listed. (fluorescent tubes are included)
	Cat. No. 50034		Cat. No. 50038	24 inch.....	Cat. No. 50077
				48 inch.....	Cat. No. 50078

	Explosion-Proof Switch Class I Div I or II For use in hazardous locations. Surface mount type with cast aluminum housing. Specify 115V/20 amp or 230V/20 amp. UL listed.		Explosion-Proof Plug Class I Div I or II Adaptable for use with all receptacles. 3-pole, 2-wire, Specify 115V/20 amp or 230V/20 amp AC. Not installed at factory. UL listed.		Explosion-Proof Receptacle Class I Div I or II For use in hazardous locations. Surface mount type with aluminum housing, 3-pole, 2-wire, Specify 115V/20 amp or 230V/20 amp. Not installed at factory. UL listed.		Explosion-Proof Ground Fault Interrupter For use in hazardous locations. Factory sealed GFI is designed to interrupt a circuit when a ground fault is detected. 115V 60 Hz, 20 amp. Not installed at factory. UL listed.
	Cat. No. 50036		Cat. No. 50039		Cat. No. 50037		Cat. No. 50104

Fume Hood International Electrical Services (CE)

	Continental European Socket with cover cap Type: CEE7 color: gray Rating 250V/16 amp, installed at factory.		Indian / South Africa Socket ISA Type: BS546 color: white Rating 250V/15 amp, installed at factory.		United Kingdom / Ireland Shuttered Socket Type: BS1363 color: white Rating 250V/13 amp installed at factory.		Continental European Panel Mount Socket Type: CEE7 color: white Rating 250V/15 amp installed at factory.

Fume Hood Exhaust Blowers Ordering Info

HEMCO offers a complete line of chemical resistant non-metallic exhaust blowers in belt drive or direct drive options in standard or explosion proof models. Ideal for applications where corrosion resistance is critical. These blowers are available in polypropylene or fiberglass construction.

Blower Recommendations

- It is recommended that exhaust blowers be located at the end of the ducting which is typically roof mounted. This ensures a negative pressure through out the ventilation system. However for applications where the duct is going directly out through a wall above a fume hood, one option is to have a fiberglass direct drive blower installed in the top of the fume hood. By having the blower internally mounted, the installation is simplified and convenient for duct connection and servicing. However there would be an airflow sound element associated with having the blower hood mounted.
- By keeping the exhaust duct as short and as straight as possible, the total resistance will be reduced and by keeping the diameter of the duct correctly sized to the flow volume, noise and static pressure can be reduced.
- Blower wheels for polypropylene and fiberglass blowers are polypropylene.
- Vibration isolators are recommended when mounting the blower assemblies
- HEMCO recommends that a sash stop be installed on the fume hood to limit the sash height for operation. By having stop at a half open position, the total CFM can be reduced by 50%; thus by reducing the volume, energy loss, duct diameter, motor and blower size, and sound is reduced.

UniFlow SE & LE Fume Hoods

Hood Width	Hood Depth	Full Open CFM	1/2 Open CFM
36"	30"	438	241

48"	24"	654	327
72"	24"	960	480

Blower Description

- CFM at 100 FPM face velocity
- Housing is constructed of either molded composite or polypropylene for chemical resistance.
- Flange inlet collars enable easy connection to ductwork.
- Wheel is dynamically balanced to minimize noise and increase efficiency.
- Belt drive models have Ball bearing pillow blocks which are pre-lubricated and resistant to both moisture and dirt.
- Shaft is constructed of polished steel with a coating to prevent rust and corrosion.
- Motors meet NEMA standards for single speed motors.
- These blowers are ideally suited for both supply and exhaust applications in laboratories, educational, pharmaceutical, industrial, and other applications.

Vertical Intake Vertical Discharge Blowers

Vertical Intake Vertical Discharge Blowers, mounted in the interstitial ceiling space of the fume hood. Blower housing is constructed of FRP for chemical resistance Direct drive blower and impeller wheel are epoxy coated for superior chemical resistance. Explosion proof blowers have epoxy coated non-sparking aluminum impeller wheels. Motor is 115V, single phase and has thermal overload protection. Available on UniFlow SE, and CE fume hoods. 1 year manufacturer's warranty

Apparatus Grids and Fire Extinguishers

Distillation apparatus grids are designed to mount small apparatus and glassware in the interior of the fume hood, maximizing the work area. Grids are available in aluminum, stainless steel, or fiberglass to meet specific needs. Mounting options: 1. Grids can be mounted to the side walls of the fume hood, 2. When more strength is required, grids can mount to both the sidewalls and the worksurface, consult factory for details.

Fume Hood Apparatus Grids

Aluminum Apparatus Grid					
Fume Hood Width	48"	60"	72"	96"	
Grid Width for Hood as Installed	36"	50"	62.5"	86.5"	
Aluminum Rod Assembly 1/2" dia.	50141	50151	50161	50181	

- All components are machined from solid aluminum bar stock.
- All aluminum lattice rod components are furnished with a satin (brushed) finish.
- Backing plates for hood wall and mounting screws for flanges are not included.

Stainless Steel Apparatus Grid					
Fume Hood Width	48"	60"	72"	96"	
Grid Width for Hood as Installed	35"	46"	56"	81"	
Stainless Steel Assembly 1/2" dia	50142	50152	50162	50182	

- Stainless steel components offer superior strength and corrosion resistance for even the most demanding applications.
- All components are machined from Type 316 stainless steel bar stock and polished to a satin finish.
- Backing plates for hood wall and mounting screws for flanges are not included.

Non-Metallic Composite Apparatus Grid					
Fume Hood Width	48"	60"	72"	96"	
Grid Width for Hood as Installed	35"	46"	56"	81"	
Fiberglass Rod Assembly 1/2" dia.	50143	50153	50163	50183	

- All rod components are white fiberglass.
- All connectors are molded in black nylon for strength and chemical resistance.
- Backing plates for hood wall and mounting screws for flanges are not included.
- Half open style clamps, facilitate adding or removing rods from existing assembly.

Fume hood with apparatus grid installed

Fire Extinguishers for Flammable Hazards in Fume Hood fume chamber

Foremost: Fume hood fires must be extinguished promptly, failure to do so could result in loss of life and valuable equipment & processes. In case of a fire inside of a fume hood. 1. Lower the sash into the closed position. 2. Pull the manual front mount discharge cable to activate the fire extinguisher. 3. Shut off the fume hood blower on the fume hood, and any remote exhaust blowers that are connected. 4. Shut off any utility services that could feed a fire. Fire extinguisher activation occurs at 165° Fahrenheit. These are recommendations, contact your laboratory safety officer for guidelines.

ABC Dry Chemical Fire Extinguishers

1. Fire Extinguisher with automatic activation at 165° Fahrenheit.
 - With dry chemical Monoammonium Phosphate, 10 lb.....Cat No. 53030

Halon Fire Extinguishers

2. Fire Extinguisher with automatic activation at 165° Fahrenheit.
 - With Halon, up to 50 Cubic feet.....Cat No. 53050
 - With Halon, 125 Cubic feet.....Cat No. 53125
 - Manual Discharge Cable Kit.....Cat No. 53007
- Manual discharge cable kit **Note:** Larger hoods may require (2) or more extinguishers, based on interior cubic dimensions.

Fume Hood Ductwork & Venting Accessories

Ducting and accessories are chemical resistant and easy to install.

Flexible and Rigid PVC Ducting		4"	6"	8"	10"	12"	14"

Fume Hood Ventilation and Duct Design

Ductwork connected to fume hoods may be arranged in a variety of patterns depending on requirements. Generally, the best exhaust system involves the shortest duct length and the fewest elbows. Duct size, length, and number of elbows affect static pressure loss and blower efficiency. Ideally, each fume hood should have its own ducting and blower to maximize hood flexibility and reduce danger of back draft from other hoods.

Common or manifold ductwork designs can be used, provided duct and blower have been sized properly. In these designs, individual hood dampers are recommended to balance the system. Hood users must be aware of how different hood exhaust fumes will react when mixed in the ductwork. Rigid PVC ductwork is recognized as an excellent fume hood exhaust duct material. The smooth interior surface reduces static pressure loss and chemical waste build up, and PVC is extremely resistant to a wide variety of reagents. For some applications flexible PVC lined duct provides adequate service and can significantly reduce installation costs. When planning exhaust ducting, duct size, length, number of bends, and exhaust material must be considered. Consult HEMCO for Lab Ventilation Solutions.

Air Flow Monitors
Note: OSHA recommends air flow alarms to be installed on all fume hoods.

Air Flow Monitor Analog
Continuously monitors face velocity air flow of fume hood. Select and calibrate at desired FPM velocity set point. If the hood face velocity falls below set point, an audible alarm sounds and a visual red indicator light appears. Air flow alarm is factory installed or can be field installed. 115/60Hz AC. Cat. No. 51403

Air Flow Monitor with Digital Display
Continuously monitors face velocity air flow of fume hood. A digital display of face velocity in m/sec or FPM that indicates safety reading with an audible alarm. Push button calibration and 3 programmable input/output relays. Factory installed or can be field installed. Cat. No. 51410

Air Flow Monitor Intrinsically Safe
For applications where the fume chamber is classified but the surrounding lab space is not. Continuously monitors face velocity air flow of fume hood. If the hood face velocity falls below set point, an audible alarm sounds and a visual red indicator light appears. Factory installed or can be field installed. Cat. No. 51404

Minihelic Gauge
Gauge monitors the pressure across the HEPA filter. Gauge mounts on the fume hood or on the filter housing. Measure range is from 0 to 2.0" wg. accurate within 5%. Gauge is 3" dia.
Cat. No. 51300

Magnehelic Gauge
Gauge measures static pressure across the HEPA filter. Can mount on the fume hood or the filter housing. Range of measurement is from 0 to 2"wg. dia. accurate within 2%. Gauge is 5"
Cat. No. 51301

Mini Photohelic Gauge
Mini-Photohelic differential pressure gauge with two SPDT switching set points, is designed to measure and control positive, negative, or differential pressures consisting of noncombustible and non-corrosive gasses. Gauge is 3" dia.
Cat. No. 51302

Digihelic Gauge
Gauge allows selection of pressure, velocity, or volumetric flow operation. Menu keys to access 5 menus which provide access to security level, selection of pressure, velocity of flow operation, and selection of engineering units. Gauge is 3" dia.
Cat. No. 51303

HEMCO Fume Hood Materials & Chemical Resistance Chart

UniFlow Fume Hoods are constructed of white composite **Fiberglass Reinforced Polyester (FRP)** material. FRP is an excellent general purpose material for fume hood construction.

- Superstructure features unitized dual wall construction with integral one-piece fume chamber for total chemical resistance, non-sparking construction, for hazardous locations.
- UniFlow HiPel FRP Composite construction is UL 1805 Classified for Laboratory Fume hoods and cabinets.
- HEMCO HiPel FRP Composite conform to NFPA 45 for products used in laboratories.
- To provide for the best airflow performance through the fume chamber, any heat generating equipment should be elevated 2" to 3" above work surface and 4" to 6" away from side walls and rear baffle system, and at least 6" away from the sash opening.

Chemical resistance of HEMCO's most widely used FRP composite construction, and other liner material options.

Laboratory Ventilation Recommendations

Proper placement and use of fume hoods and blowers are important laboratory ventilation requirements. HEMCO offers the following suggestions to help in your laboratory layout. For technical support please contact HEMCO.

Location of Hood

- Room air supply, air flow patterns and user convenience are the most important considerations in planning the location of hoods within the laboratory.
- Hoods placed directly in front of doors, open windows, or air conditioning registers will not perform efficiently. Drafts create turbulence at the face of the fume hood and disrupts air flow.
- Hoods should not be placed where users would be forced to work in the line of traffic. Traffic in front of the hood adversely affects fume hood air flow.
- When common exhaust or supply systems are used for several hoods, the hood units should be arranged so minimum amount of ductwork is required. See page 17 for more suggestions on planning your ducting system.
- Hoods used as general lab exhaust should generally be located on the opposite wall from the side-wall inlet registers or doors. The hoods should be located so that air from the registers or diffusers sweep through the laboratory area first then into the hoods.

Hood Operation

- Consult Lab Safety Officer for correct use of fume hood.
- Hoods should not be used as laboratory storage space. Unnecessary material or unused bottles and flasks can block exhaust openings and interfere with hood performance.
- OSHA requires a fume hood be equipped with an Air Flow Monitor to track air flow velocities and warn operator of potentially dangerous low air flows due to damper, blower failure, blockage of ductwork system, or extreme sash opening height.

Fume Hood Radial Flow Supply Air Diffuser

The Radial Flow Diffuser is designed to provide high volume / low velocity airflow into laboratory space specifically where fume hoods are located.

The uniform / low velocity airflow prevents turbulence at the hood face and efficiently distributes supply air to ensure correct air change that supports fume hood air volume requirements.

Available duct sizes: 8 or 10 inches for 24 x 24 inch models, and 10 or 12 inches for 48 x 24 inch models.

- 24" X 24" 200-500 CFM Cat. No. 90011
- 24" X 48" 400-1,000 CFM..... Cat. No. 90012

Clean Air In-Line Carbon and or HEPA Filtration Systems

HEPA Filter Paks effectively collect particulate contaminants from the exhaust air stream.

Filters can be grouped together end to end for HEPA and Carbon, or side by side for greater airflow volume. (Consult factory)

Clean Air Carbon Filter Pak					
CFM	Size		Duct Size	Cat. No.	
250-650	26" x 15" x 3.5"		4", 8" diameter	50297	
650-1200	26" x 26" x 35.5"		8", 10", 12" diameter	50298	
Carbon Filters			Prefilter (6 per carton)		
CFM	Size	Cat. No.	CFM	Size	Cat. No.
500	24" x 12" x 12"	52100	500	24" x 12" x 2"	52000
1000	24" x 24" x 12"	52101	1000	24" x 24" x 2"	52001
Clean Air HEPA Filter Pak					
CFM	Size		Duct Size	Cat. No.	
250-650	26" x 15" x 35.5"		4", 8" diameter	50188	
650-1200	26" x 26" x 35.5"		8", 10", 12" diameter	50189	
HEPA Filters			Prefilter (6 per carton)

500	24" x 12" x 12"	50094	500	24" x 12" x 2"	52000
1000	24" x 24" x 12"	50095	1000	24" x 24" x 2"	52001

Energy Savings Recommendations

A comparison of two fume hoods below is based on a designed 12" high operating sash height with sash management and a full open sash height without sash management. By maintaining a lower operating height, energy can be conserved, material costs saved, and user safety enhanced. Sash Management can SAVE 57% on fume hood operating cost.

Energy Savings

Annual cost to operate \$8190.00

72" CAV WITHOUT Sash Management

1. UniFlow 72" CAV bypass fume hood **WITHOUT** sash management requires 1170 CFM to maintain 100 FPM (face velocity) with the sash fully open. At an average of \$7.00 per CFM, the annual cost to operate this fume hood would be \$8190.00

Annual cost to operate \$3500.00

72" CAV WITH Sash Management

Total Energy SAVINGS = \$4690.00 per year

Equipment Savings

Based on 20' of ducting, (1) 90° elbow, stack outlet, and exhaust blower

UniFlow 72" CAV bypass fume hood **WITHOUT** sash management would require 12" diameter ducting to handle the volume and duct velocity at \$200.00 per foot.

UniFlow 72" CAV bypass fume hood **WITHOUT** sash management an exhaust blower designed to maintain 100 FPM (face velocity) would require 1170 CFM @ 0.75" w.g. (static pressure) with a 10" diameter inlet and 1/2 hp motor at \$3720.00

UniFlow 72" CAV bypass fume hood **WITH** sash management would only require 8" diameter ducting to handle the volume and duct velocity at \$143.00 per foot.

UniFlow 72" CAV bypass fume hood **WITH** sash management an exhaust blower designed to maintain 100 FPM (face velocity) with sash at 14" operating height, would only require 500 CFM @ 0.75" w.g. (static pressure) with a 9" diameter inlet and 1/4 hp motor at \$3264.00

Total Equipment SAVINGS ducting & blower = \$1617.00

Importance of Duct Velocity

- Duct Velocity** is important to the safe ventilation of laboratory fumes & particulate, 1200 to 1500 FPM (duct velocity) is recommended. A 72" fume hood with 1170 CFM (for full sash opening) will have a 12" diameter belled outlet duct connection & will maintain 1400 FPM duct velocity. A 72" fume hood with 500 CFM (for 12" sash opening) will have an 8" diameter belled outlet duct connection & will maintain 1400 FPM duct velocity for over a 50% reduction in volume.

Importance of Room Air Changes per Hour

- 10-12 Air Changes per Hour** is typical to a laboratory and in some cases the fume hood not only exhausts hazardous fumes but serves as the general ventilation of the lab. The lab should always be under negative pressure; thus 10% of the exhaust should come in from the corridor under or around the door. For example, a 12' x 25' x 9' high room, at 2700 cu ft, would require approximately 450 CFM. With the hood at 500 CFM and 10% of that coming from the corridor, the minimum supply in the room would be 450 CFM. However if a greater amount is brought in, there would need to be general exhaust from the room to prevent the room from being pressurized.

- Make-Up Air**, Considering that a fume hood exhausts a large amount of air from the lab space, it is necessary to ensure that there is sufficient air supply to the lab, yet still maintaining a negative air pressure to the surrounding area.

- Because of the additional resistance in the duct system, the static pressure of inline filtration would need to be calculated when sizing the exhaust fan.

- Filtration**, Depending on the contaminant, an inline HEPA or carbon filter may be necessary to prevent pollution to the outside environment.

Sash Stop
located at 1/2 open to reduce air flow 50%,
