

SURFACE SYSTEMS

Cleaning concepts for
parts, tools and
technical surfaces.

Aqueous, mechanical
and thermal

www.wiwox.de

Preserving technical surfaces is our mission and also our passion. We have been conceiving professional tool and part cleaning processes for three decades.

Blasting technology, pyrolysis, ultrasound and aqueous cleaning methods – our cleaning concepts are the answer to familiar and new challenges in maintenance and industrial production. WIWOX customers benefit from our vertical integration and many years of experience: They are provided with informed consulting services along with the most practical and economical complete solutions. After comparisons and trial runs in our own laboratory, our customers choose between purchasing or leasing a system, or service cleaning

In any case, our goal is to maintain the value of production facilities and optimise production processes beyond what is normally expected. Our satisfied and motivated employees contribute to this in a company culture of partnership and mutual trust.

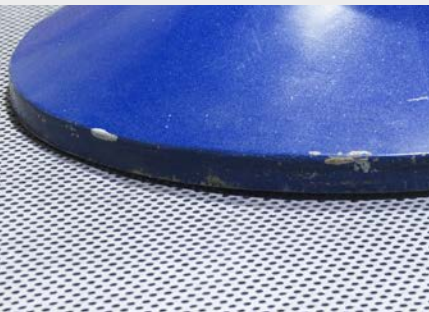

WIWOX BLASTING TECHNOLOGY

Everything is possible from compact blasting machines to blasting chambers and systems designed according to customer requirements. Many different types of surface processing are supported in combination with our extensively tested blasting media – metallic, organic or ceramic

For screws, tools and technical surfaces.

Aqueous cleaning.

For moulds and parts.

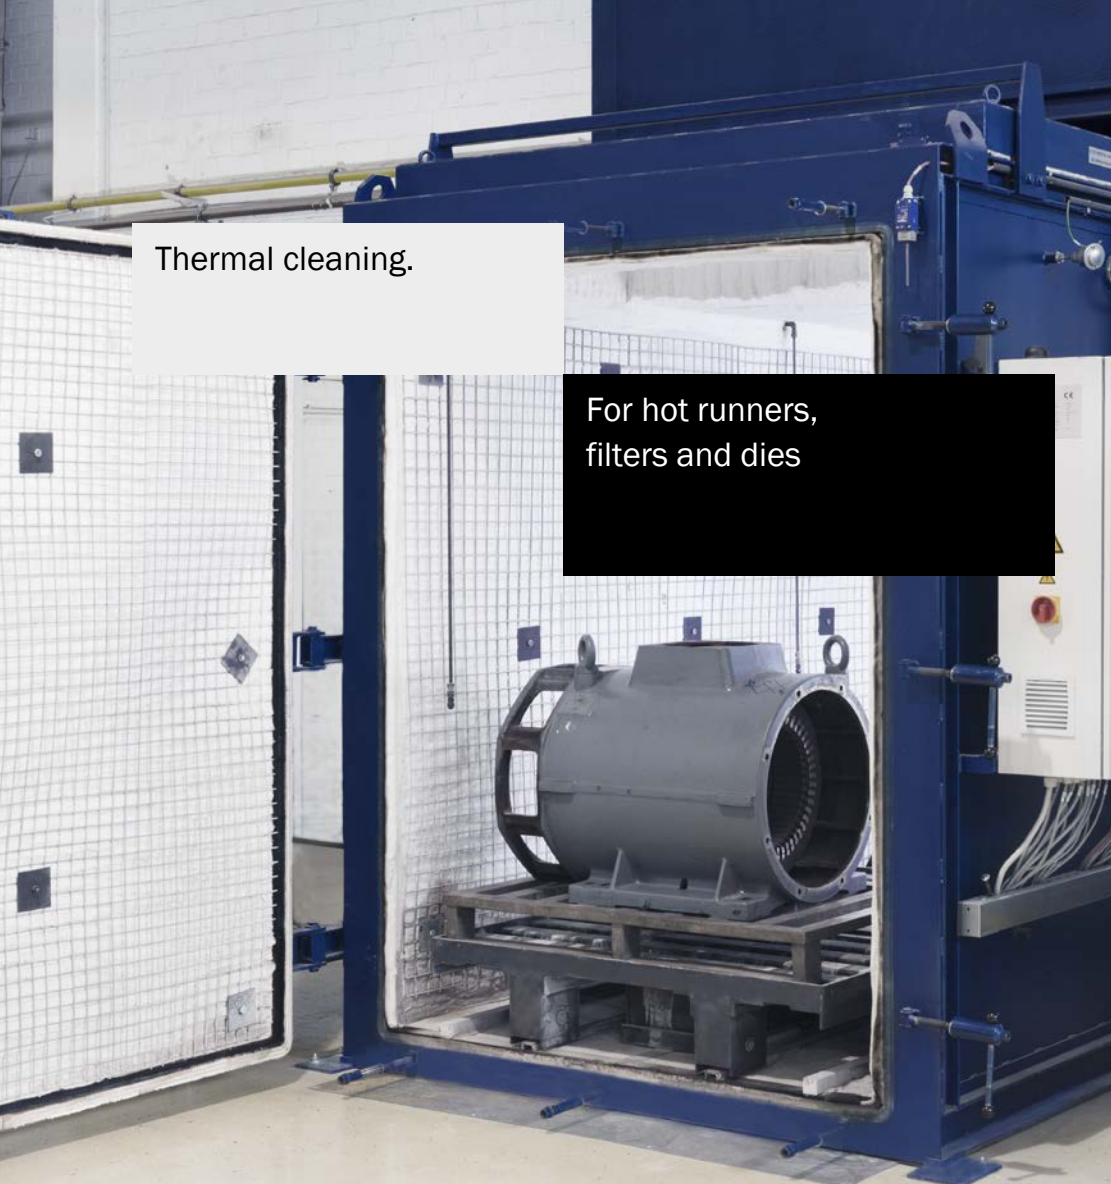

WIWOX SPRAY CHAMBER WASHING SYSTEMS AND ULTRASOUND SYSTEMS

Production tools of high quality require cleaning methods that are very gentle on materials. WIWOX ultrasound systems offer the best solution for removing organic and inorganic particles – even in case of complex part geometries.

Our customers use WIWOX spray chamber washing systems for pre-treatment, degreasing and cleaning large components and bulk goods. Here too the best system is tailored exactly to the customer's requirements.

WIWOX places great emphasis on working with only the leading international equipment manufacturers.

Thermal cleaning.

For hot runners,
filters and dies

WIWOX CLEANING SERVICE

Our customers count on our job-order cleaning team for their daily cleaning needs – mechanical, aqueous and thermal: our own systems and processes guarantee safe treatment of important work pieces. Detailed consulting and the documented cleaning of samples guarantee consistent results over a long period of time.

WIWOX LABORATORY

This is where we tinker, test and think outside the box. One might say that the heart of the WIWOX development team beats here.

The WIWOX Laboratory offers our customers the opportunity to have highly individual and novel cleaning processes developed. Many of the methods created here have considerably optimised production processes and improved cost effectiveness.

WIWOX PYROLYSIS-OVENS

for thermal paint, coating and insulation removal. Whether compact systems or industrial ovens: WIWOX provides the best solution. Thermal treatment is particularly well suited for larger components, though residues or cleaning interior surfaces.

The temperature of the WIWOX pyrolysis ovens can be perfectly controlled notwithstanding the tremendous heat development. This makes it possible to use thermal cleaning even with more sensitive work pieces.
