WIRE WORKING

BULL BLOCKS AND MULTI- STEPS WIRE DRAWING MACHINES

Violi, always interested to the needs of the market, produces a wide range of wire drawing machines from 6, 10, 12, 14 and 21 steps with cutting-edge electronic components and innovative technologies.

Equipped with fully electronic wire winding units, these machines allow to produce very thin wires with high quality standards.

The Bull Block wire drawing machines allow to draw wire and tubes of medium and large diameters from previous processes or continuous casting wire. Diameter of capstan is agreed with customers.

WIRE STRAIGHTENING MACHINE WITH FLY CUTTING SYSTEM

The wire-straightening machine with fly cutting system model VM/MRTVS-C is designed to straighten and cut to length – through a cutting system with circular saw blade or shears – metal wires or tubes with diameter up to 8 mm without stopping the advancement during the cutting operation.

PROFILES STRAIGHTENING MACHINES

The profiles straightening machines are designed and built to straighten metal bars and tubes with square, rectangular and complex shapes. The machine consists of two groups of 7 rollers all motorized. Storage of work programs for different types and sizes of profiles.

TUBES, BARS AND PROFILES WORKING

HYDRAULIC DRAWING MACHINES AND PLANTS

Violi's patented hydraulic tubes drawing machines ideal for drawing metal tubes or bars with circular or complex profile. They guarantee high standards of quality and precision of the finished product. They are made in different versions of both power and useful length.

Violi also produces drawing benches equipped with pointing machines ideal for wedding rings production.

The company supplies a wide range of equipment for tubes working such as: manual or motorized manual mandrel releasing systems or tubes pointing machines.

Experience, research and developing of new technologies allow Violi to design and manufacture totally automatic tubes drawing plants.

TUBES AND BARS WORKING

STRAIGHTENING MACHINES AND PLANTS

The Violi series of hyperbolic roller straightening machine is ideal for the straightening of cold drawn metal tubes and bars with diameters between 3 and 65 mm.

Experience, research and developing of new technologies allow Violi to complete this series of standard machines with manual, semi-automatic or fully automatic tube loading/unloading automations.

Advantages that customers find with Violi tubes straightening plants:

- Increase production;
- More precise straightening process;
- Ergonomic process management.

WHO IS VIOLI MACHINE

DESIGN, RESEARCH AND INNOVATION

For over 30 years Violi is one of the leading factories in the production of jewellery making machine. The experience in this field allows Violi to start working with industries and precious metals recovery companies, getting the trust of national and international realities.
