PRODUCTS

Bending

Our press brakes are designed for operators of all skill levels. Our machines feature user-friendly graphical controls, robust construction, and cutting-edge technology for precision in every bend. Safety is our top priority, with built-in features that protect operators while maximizing productivity. Explore customizable setups with various clamping systems and crowning tables tailored to your needs. Enjoy exceptional productivity and an unbeatable price-performance ratio.

PressMaster

TOP-LEVEL HIGH-SPEC MACHINE

- 24-inch FASTBEND 3D Multi-touch CNC Controller Screen
- Up to 6-axis backgauge
- Includes HACO BEND Pro offline software
- Hydraulic tool clamping
- Equipped with premium LazerSafe IRIS optical safety guards

EuroMaster S

MULTI-LEVEL POWERHOUSE

- 21-inch FASTBEND 2D Multi-touch CNC Control Screen
- Up to 6-axis backgauge
- Equipped with LazerSafe optical safety guards and rear safety curtain

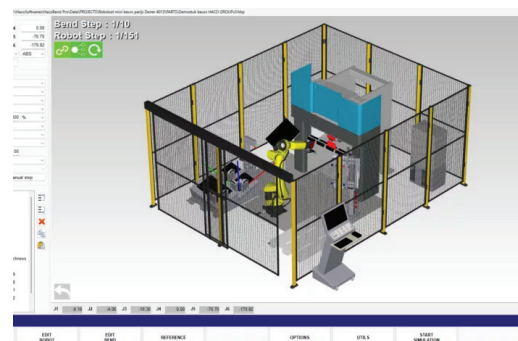

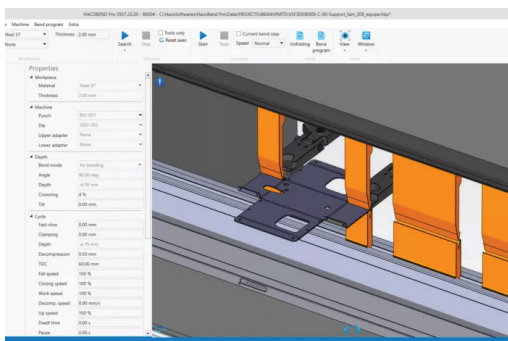

SynchroMaster

ENTRY-LEVEL PRESS BRAKE

- 18.5-inch EASYBEND 2D multi-touch CNC control Screen
- Up to 4-axis backgauge
- Equipped with DSP optical safety guards and rear light curtain

Offline Software

Masterminds in offline software

HACOBEND Pro

BENDING SOFTWARE

Improve your bending processes from A to Z with HACO's advanced HACOBEND Pro software. This powerful tool is designed to more effectively organize and manage bending operations. From initial design to final bending, HACOBEND Pro provides a seamless workflow, giving you complete control over every stage of the process. Simplify complex bending operations, optimize accuracy and save valuable time.

Robotbending

ROBOT BENDING SOFTWARE

HACO's offline robot bending software is designed to take your sheet metal working processes to new heights. With this advanced software, you can effortlessly and accurately control a robotic cell, making your sheet metal processing more efficient than ever before.

Shearing

HACO's guillotine shears deliver precise, cost-effective cutting with minimal burr formation and waste. Equipped with modern CNC technology, our shears feature programmable cutting patterns and automatic adjustments for efficiency in various manufacturing sectors.

HSLX HD

HEAVY-DUTY SHEAR

Featuring the SC10IT control with automatic rake and blade gap adjustment. Shearing capacity of up to 1 inch.

GSX

BUILT FOR PRODUCTION

Our newest shear model, the GSX, incorporates the advanced SC10IT controller and top-mounted cylinders for exceptional efficiency. Enjoy automatic rake and blade gap adjustments to minimize user error and material waste.

TS

ENTRY-LEVEL SHEAR

The TS shears come with power rake angle adjustment from the SP9 control panel and manual blade gap adjustment for ease of use.

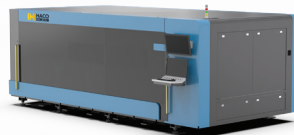

Fiber Lasers

In partnership with Glorystar Laser, HACO offers a range of innovative fiber laser cutting machines that provide unmatched speed and accuracy. Choose from an extensive selection of models, from entry-level options to heavy-duty systems. With a focus on maximizing productivity and delivering exceptional value, our machines come with the added assurance of local parts and reliable support from HACO USA and Glorystar.

Tube Lasers

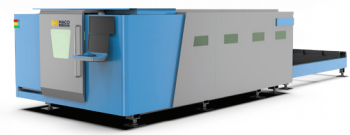

up to 12 kW

Box Laser

GS-C

up to 6 kW

Flatbed Lasers

up to 40 kW

Service and more

At HACO, we recognize the critical importance of maintaining uninterrupted operations. Our dedicated team of service professionals is committed to addressing your needs with efficiency and precision. With our skilled technicians providing timely interventions, your production process remains smooth, allowing you to concentrate on what matters most: the success of your business. When expert support is needed, rely on HACO's Machinery Masterminds.

Plate and Section Rolling

4HBR

We offer a full range plate and profile roll-bending machines:

Plate bending rolls:

- 2 roll
- 3 roll
- 4 roll

HACO HPR Series: Profile rolls (angle rolls) built with advanced technology for superior strength and quality. Capable of bending steel, stainless steel, and aluminum with virtually no maintenance.

Iron Workers

With over 60 years in the metalworking industry, HACO Kingsland is recognized for top-quality, innovative ironworkers. Our machines come in capacities from 50 to 175 tons.

KINGSLAND
BY **HACO**

Plasma Cutting

Our versatile family of plasma cutters is designed for mild steel, stainless steel, and aluminum across a range of thicknesses and surface conditions. These machines offer both conventional and high-definition cutting and marking capabilities. They are suitable for material thicknesses from thin gauge to 5 inches, integrated with Hypertherm plasma cutting technology for outstanding performance.

Machinery Masterminds

Located in Houston, Texas, HACO USA is dedicated to meeting the diverse needs of industries such as sheet metal fabrication, machine building, and structural engineering with a comprehensive lineup of industrial equipment including press brakes, fiber lasers, hydraulic guillotine shears, and more.
